PROFILE SUMMARY

Results-driven Full Stack .NET Developer with 5+ years of experience building scalable web and enterprise applications for Financial Services and E-commerce, using C#, ASP.NET Core, Microservices, SQL Server/PostgreSQL, and Angular. Skilled in SOLID principles, design patterns, unit testing (XUnit, NUnit, Moq), and Azure Cloud, with a track record of optimizing performance, resolving production issues, and mentoring developers in Agile/Scrum teams.

EDUCATION

BE Computer Science and Engineering, SSN College of Engineering 2017 - 2021
CGPA - 8.42

SKILLS

Languages	C#, SQL, TypeScript, JavaScript, HTML5, CSS3, Python
Frameworks & Libraries	ASP.NET Core, ASP.NET MVC, Web API, Entity Framework, ADO.NET, Angular, RxJS, Bootstrap, jQuery
Architecture	Microservices, RESTful APIs, SOLID Principles, Design Patterns
Database	SQL Server, PostgreSQL, LINQ, Stored Procedures, SSIS, SSRS
Testing	NUnit, Moq, XUnit, Unit Testing, Test-Driven Development (TDD)
Cloud & DevOps	Azure Cloud, Azure Service Bus, CI/CD, Jenkins, GIT, Bitbucket
Tools & IDEs	Visual Studio, VS Code
Methodologies	Agile, Scrum, Sprint Planning
Soft Skills	Communication, Problem Solving, Analytical Thinking, Mentoring

EXPERIENCE

BNP Paribas Oct 2024 - Present
Software Engineer

- Developed and maintained business-critical financial web applications using **ASP.NET MVC**, C#, HTML, CSS, and jQuery, delivering secure and high-performance solutions for users.
- Optimized SQL Server stored procedures and added targeted indexes on high-traffic tables, reducing average query execution time by **30-40%** and eliminating timeout errors on the reporting dashboard.
- Built a **.NET Core** background service, hosted as a Windows Service on a configurable schedule, to automatically process files up to 2GB for parsing and staging data into SQL Server tables to generate a report, eliminating manual, on-demand processing that previously required users to trigger runs via UI button clicks.
- Refactored legacy modules to follow **SOLID principles** and **Dependency Injection patterns**, improving testability and enabling unit test coverage with XUnit and Moq.
- Designed and developed an internal utility application using **Angular and Web API** that communicates with SharePoint to identify unused files and clear storage, reducing SharePoint storage usage by 50% and eliminating 5-6 hours of manual cleanup effort.
- Integrated AI-assisted tools into daily development workflow to generate boilerplate, refactor legacy code, and accelerate feature delivery by **20%**, while maintaining code quality through peer review standards.
- Built and maintained CI/CD pipelines in Jenkins to automate build, test, and deployment processes, streamlining release cycles and reducing manual deployment effort.
- Mentored junior developers** on .NET Core best practices and code review standards, reducing production defects from their code.

- Worked in Agile/Scrum environments, actively participating in sprint planning, estimation, backlog refinement, and release activities.

LTIMindtree

Nov 2021 - Oct 2024

Software Engineer

- Developed new features for contract-processing web application using C#, ASP.NET Core, **Microservices**, supporting 5k daily active users processing **1000 transactions per day**.
- Designed microservices following SOLID principles and Repository/Dependency Injection patterns, improving code modularity and reducing coupling between service layers.
- Designed and optimized database schemas and queries in **PostgreSQL**, ensuring data integrity and efficient retrieval for high-volume transactions.
- Built new Angular features using RxJS observables and REST API integrations to streamline data processing and improve UI responsiveness.
- Utilized **Azure Cloud** services for application hosting and monitoring, supporting deployment pipelines and ensuring high availability of business-critical applications.
- Built SSIS packages to extract, transform, and load data between SQL Server instances, automating a previously manual data migration/sync process.
- Rewrote slow-running SQL queries flagged in production monitoring, cutting page load times on dashboard from **1m to 20s**.
- Resolved 3-5 production defects per sprint through root cause analysis, reducing recurring incident tickets by 20% over a month.
- Collaborated with business analysts and QA teams to clarify requirements and validate features early, reducing rework and defects found post-development.

LTIMindtree

Aug 2021 - Nov 2021

Graduate Engineer Trainee

- Built an e-commerce web application end-to-end. Designed the SQL Server schema, developed REST APIs using ASP.NET Core Web API, and built the Angular front end with 5 components (product catalog, cart, checkout).
- Wrote **LINQ** queries and stored procedures to support product information retrieval, order history storage and inventory tracking.

KEY ACHIEVEMENTS

Rising Star Award - BNP Paribas

Aug 2025

- Recognized for outstanding performance, consistent delivery, and high-quality contributions to project milestones.

Shooting Star Award - LTIMindtree

June 2024

- Recognized for outstanding contributions as a team player, consistently supporting collaborative delivery and team success.
