- Completed B.Tech (ECE) from **DR. A.P.J Abdul Kalam Technical University** formerly known as Uttar Pradesh Technical University, Lucknow in 2015 with First Division Grade.

PROJECT SUMMARY

Current Project: Corporate Retirement Portal (Nov 2022 – Till Date) at **Morgan Stanley**

Role: Test Lead

Note: Earlier working as Consultant now as Full time employee.

Testing Strategy: Service level Testing, UI Testing, Playwright, FAST Automation Testing, Performance Testing.

Project Description: To provide the best retirement plan to clients.

Responsibility:

- Leading QA Team (India, New York)
- Actively working on test automation with the help of FAST Framework
- Involved in all the scrum ceremonies
- Review automation script, test case
- DB validation along with services
- Involved in end to end functional testing processes

Projects worked in TCS:

1. Project Name: Core Engineering – Client: UIDAI

Project Duration: June 2021 to Oct 2022

Role/Application: Test Automation Engineer / Performance Engineer

Testing Strategy: API testing, Portal Automation, Performance testing

Project Description: Core engineering team is handling all the core API of UIDAI and My Aadhaar portal. All the different portals use to consume CEG API's to perform certain transection.

Responsibility:

- Involved in design and execution of test scenarios for API's and portal
- Taking care of all the API's (UID Generator, Packet Extractor Services, CSAPI, SSAPI, Doc Archival API, Secure QR Code API, Mandatory Biometric Update API, and GSAPI.
- Created Test cases as per the Business requirements and executed them
- Involved in creation of Test Plan, Test cases and execution of Test Cases in Test Rail.
- Involved in **Test Automation** suite creation for regression Testing and smoke testing
- Prioritizing test cases for automation
- Using Java **Selenium**, TestNG, and POM based automation core framework for My Aadhaar portal.
- Database testing using **SQLYog** and log validation using **WinSCP**.
- Defect Reporting and Tracking using JIRA
- Involved in all QA and testing activities during UAT and PROD Release
- Involved in smoke, functional, ad-hoc and Regression testing during SIT phase.
- Involved in performance testing using JMeter.
- Involved in API testing using Postman.
- Actively participated in all Scrum meeting like Grooming, Review & Planning and
- Using **Java Selenium** for My Aadhaar portal automation.

Projects worked in Motorola:

1. Project Name: Engage Notifications – Web version

Project Duration: Worked from Apr 2019 to May 2021

Role/Application: QA

Testing Strategy: **Automation testing** (End to end)

Project Description: With the help of engage portal we are sending any kind of News notification or any information in the form of notifications or cards to the end-user who is using **Motorola** mobile phone.

Responsibility:

- Develop automation script against assigned **Jira** ticket and automate functional test suite using **hybrid framework**.
- **Jenkins integration** for all the test suite.
- Update and execute the script when there is any build change.
- Develop the test script using **TestNG** and **POM** with webdriver.
- Applying various designs and documenting the automation test strategy
- Creating an **automation test** plan and getting approval
- Implementing it as per the structure of the project
- Creating, enhancing, debugging, and running the test script
- Collating and monitoring the defect management process
- Coming up with exact solutions for problems related to **object identity** and **error handling**
- Interacting with customers/clients to solve the various issues they face and updating on the situation

2. Project Name: Hello Moto (Hello You)

Project Duration: Worked from Apr 2019 to May 2021

Role/Application: QA

Testing Strategy: End to end Manual testing of **new feature** & Automation on the **stabled feature**.

Project Description: It is a **News app** designed for **our customers**. By using this app users can watch live videos/news, play **games**, listen to **Podcast**, **Buy Motorola products**, Users can **send feedback**, Users can get to know about **Motorola's latest launches** according to shipment country.

Responsibility:

- Market Analysis of Similar product or APP & perform one round of **brainstorming** sessions among the team.
- Discover **new features** and **design PPT** & Share with the product owner, once it is approved to share with teammates and start designing **Test Cases**.
- Identify **Stable** features and **unstable** features of the app.
- Run Smoke Test Suite in every deployment and perform **retesting** on **new changes**.
- Report defect, retest defect after the fix, and close.
- Send Test Summary Report among the team.
- Preparing **Mitigation planning report**.

Project 3: Mobile Software Upgrade (Android 9.0 to 10.0, Android 10.0 to 11.0).

Project Duration: Worked from Apr 2019 to May 2021

Role/Application: QA

Testing Strategy: End to end Manual testing of **new features** & Automation of **stable features**.

Description: It involves flashing and testing the non-released builds & hardware on multiple **Qualcomm** and **MediaTek** chipset devices using **ADB** commands, **SPD Upgrade Tools**, and **MTK Droid Tools**.

Roles and Responsibilities:

- Detailed study of the Software Requirement Specification (SRS).
- Test cases design and execution, and review across the modules.
- Performed smoke testing and regression testing.
- Performed Functional Testing, GUI Testing & Regression testing for different builds.

- Defect Tracking and Bug reporting in Quality Center.
- Involved in daily Teleconferences with the onsite team.
- Reporting consolidated daily Status reports to the onsite team.
- Responsible for weekly status updates showing the progress of the testing effort and open issues to be resolved.
- Coordinating and interacting with team members, development team, and clients.

Projects worked in EMIDS:

Project 1: Greenway Health

Domain: **Healthcare Insurance**

Testing Approach: Manual testing and QA testing (Web & Desktop Application)

Test Management Tool: JIRA, Version one, TFS

Project Duration: Worked from Apr 2017 to Apr 2019

Description:

Greenway Prime Suite is USA based integrated electronic health records (EHR) and practice management (PM) software system for outpatient providers. Prime Suite offers more than 4,000 customizable clinical templates and EHR content for more than 40 specialties.

Greenway **Prime suite** a one database solution for scheduling, billing, and electronic health records (EHR). From the moment your patient calls for an appointment, PrimeSuite will help to streamline the entire process.

Roles and Responsibilities:

- Worked with different modules of Prime Suite & Prime mobile Application like: Appointment Scheduling / Reports / Medications / Immunization / Health Insurance / Claims Processing / Chart / Patient Chart and so on
- Involved in manual and automation testing for patient portal.
- Creating test scenarios for EMR systems; executing the tests, and evaluating the results. Gathering input from clients is also an important function
- Conducting defect triage meetings providing details about the defects to the team
- Writing test cases, executing tests and recording the results
- Responsible for all aspects of quality assurance manual testing
- Manual testing of front-end, API and back-end layers
- Tested Web / Desktop / Mobile version of Prime Suite and Prime Mobile application.
- Building and executing detailed test plans from functional requirements;
- Expert with JIRA or similar bug tracking tool
- Performs the testing function within the agile development team

PERSONAL DETAILS

- **Name:** Saksham Kumar
- **Father Name:** Bal Mukund
- **Date of Birth:** Dec 30, 1994
