

CURRICULAM VITAE

Mancherla Shivaprasad

Contact: +91-8309259171

Email: mancherlashivaprasad8@gmail.com

Professional Exposure:

- Having a total of 9.3 years of experience in Security Operational Centre (SOC) and Skilled primarily in Threat hunting, Incident Response, Threat Intelligence, Investigation and admin engineering activities.
- Expert in SIEM platforms (RSA NetWitness, QRadar) rule tuning, alert triage, log analysis, use case development, custom parser's by using RSA LPT tool, integration and dashboard optimization.
- Integration to the newly onboard appliances to the SIEM solution, and physically maintaining the SIEM servers in the Data Center.
- Conducted advanced threat hunting aligned with MITRE ATT&CK and Diamond Models, identifying stealthy APT activity and unknown IOCs.
- Investigated and responded to 20+ high-severity security incidents weekly, including malware, phishing, spoofing, and ransomware and SQL injection attacks.
- Led SOC operations and incident response lifecycle, from detection to containment, escalation, documentation, and recovery.
- Integrated threat intelligence with detection strategy; tracked threat actors using TTPs and contributed to threat intel repositories.
- Designed and deployed custom correlation rules in ESA to improve detection accuracy and minimize false positives.
- Managed SOC tool maintenance, licensing, health monitoring, and collaboration with OEMs for engineering-level troubleshooting.
- Developed and delivered daily, fortnightly, and monthly reports with threat trend insights and proactive recommendations.
- Mentored Level L1 and L2 SOC analysts conducted knowledge-sharing sessions and created escalation frameworks and incident templates.
- Developed and Execute hypothesis-driven threat hunts, analyzed logs across layers (network, system, application, registry, packet) for anomaly detection.
- Supported change management and incident communications across cross-functional teams.
- Participated in SOC coordination calls, incident reviews and liaised with leadership to align response priorities with business goals.
- Development of Use cases design and fine tuning, reports analysis and further enhancement.
- Proactively reviewing and operationalizing threat intelligence to create alerting to

detect techniques, tactics, and procedures employed by threat actors.

- Quick Learner and Flexible to adapt to challenging environments/technologies and Excellent Communication & Coordination Skills.
- Team and shifts as per shift roster and working in 24*7 rotational shifts.

Educational Details:

Bachelor of Technology from Khammam institute of technology and sciences - JNTU
Hyderabad University in the year 2016

Technical Skills:

- **Technology/Skills:** Log analysis, Packet analysis, Incident Response, malware analysis, Phishing analysis, UEBA, SOAR, Log parser tool, Endpoint Detection and responses, DDOS traffic analysis, cloud application-based analysis.
- **Tools:** RSA Netwitness SIEM, IBM Qradar, Sysdig, SOAR, EDR, UEBA, Arbor (DDOS), Airtel and Radware cloud DDOS solutions.
- **Ticketing Tools:** Zammad, Midpoint, Control Portal, Sailcat, ServiceNow

Certifications:

- **CEH** - Certified Ethical Hacker (EC Council)
- RSA Netwitness

Professional Work Experience:

- I worked with Cyberloop Pvt Ltd as SOC analyst - L1 & L2 from March 2017 to 2022.
- SOC analyst as a L3 from May 2022 to till in Nusummit cybersecurity Ltd.

Work Experience:

SOC Analyst – L2			
Organization	Nusummit Cybersecurity Limited	Duration	May 2022 to 2026
Project Description	• Monitor live network traffic using RSA NetWitness and other advanced SIEM tools to detect and analyze anomalous security behavior. • Investigate suspicious activities and potential breaches using threat intelligence frameworks, including techniques for anonymous threat actor tracking. • Advanced threat hunting aligned with MITRE ATT&CK and Diamond Models, identifying stealthy APT activity and unknown IOCs. • Develop and implement use cases for SOC and SIEM workflows, contributing to both global and local security repositories. • Maintain physical SIEM infrastructure in the data center, ensuring high availability and optimal performance of hardware components. • Fine-tune correlation rules and alerts to reduce false positives, thereby increasing SOC efficiency and incident accuracy. • Create and deploy customized rules, dashboards and visualizations to enhance threat visibility and response readiness. • Execute rapid incident response protocols during threat events, containing threats and minimizing operational disruption and data exfiltration. • Translate complex technical findings into business-focused insights for executive leadership, securing support and investment for key security initiatives.		
Role & Contribution	• Monitored networks, systems, and applications using RSA NetWitness SIEM, conducting in-depth log analysis to detect anomalies and investigate potential security breaches. • Utilized threat intelligence methodologies to investigate suspicious activities, including tracking of anonymous threat actors and potential compromise indicators. • Developed and deployed custom correlation rules in ESA to enhance threat detection accuracy and performed fine-tuning of detection rules to reduce false positives and improve alert accuracy, thereby enhancing SOC efficiency. • Proactively conducted advanced threat hunting aligned with the MITRE ATT&CK Framework, identifying previously undetected APT activities and IOCs. • Developed use cases for SIEM operations contributed to the maintenance and enhancement of global and local threat intelligence repositories. • Designed, implemented, and deployed custom detection rules and dashboards to support proactive threat monitoring and visualization. • Investigated 20+ high and critical severity alerts weekly, ensuring timely triage, containment, and escalation.		

	• Participating in weekly SOC coordination calls and collaborated closely with SOC vendors (OEMs) to streamline incident workflows. • Developed and Execute hypothesis-based threat hunts using structured, unstructured, and situational methods to uncover undetected threats. • Monitored a broad spectrum of logs application, packets, system, registry, and network identifying, escalating, and documenting anomalies. • Applied the Diamond Model to assess threat actors targeting South Asia and implement countermeasures via the threat intelligence platform. • Created detailed incident reports and threat hunting documentation, including IOCs, CVEs, and global security advisories. • Published weekly, fortnightly and monthly threat hunting reports summarizing findings, techniques used, and remediation actions. • Maintained and updated threat hunting trackers and knowledge bases to ensure repeatability and documentation of best practices. • Shared threat intelligence and learnings across internal Threat Hunting teams to promote collective growth and improved response readiness. • Created new incident templates and use cases, setting a reference framework for future team escalations and response playbooks. • Maintained physical SIEM server infrastructure within data center environments, ensuring operational continuity and optimal system performance, Including participating in lift-and-shift activities. • Provided technical support on engineering-related issues in collaboration with OEMs, ensuring minimal system downtime. • Gained hands on experience integrating various devices with RSA NetWitness SIEM for enhanced visibility and event collection. • Executed rapid incident response protocols during cyber incidents, containing ransomware threats and minimizing data leakage and operational downtime. • Acted as a strategic liaison between technical teams and executive leadership, translating complex cybersecurity intelligence into clear, actionable insights that informed business decisions, optimized resource allocation, and prioritized critical security initiatives.
--	--

SOC Analyst L1 & L2

Organization	Cyberloop Pvt Ltd	Duration	Mar 2017 to 2022
Project Description	• The main goal of this project is to deliver SOC Deployments, Monitoring, Alerting, Incident Response, Reporting and IOC and incident handling plans to deploy SOC environments in client location using IBM QRadar. • Security technologies, including SIEM, IDS/IPS, firewalls, endpoint security, content filtering, and packet inspection. • Preparation and dissemination of daily, fortnightly, and monthly reports, along with the creation and distribution of aggressive monitoring reports. • Handling Spear Phishing Attacks and ensuring Spam Management within SLA. • User entity behavior and anomalies analysis within the organization. • Creating Use-causes for SOC & SIEM Operations and Global & local repositories. • Investigate and create cases for security threats while performing initial triage and escalate for further investigation and mitigation. • Monitoring live traffic using SIEM tool IBM Qradar. • Monitoring Authentication, bypass login mechanisms, 2-factor Authentications. • Monitoring of SOC events, detecting and preventing the Intrusion attempts. • Investigate malicious traffic from blocked countries and Suspicious IPs. • Using Threat Intelligence techniques to investigate suspicious events and Anonymous tracking.		
Role & Contribution	• Monitoring all security alerts, Review the alerts and handle them as per the process. This involves working with different groups and ensuring that all the alerts are closed in a timely manner. Also contributes to the process improvements via QRadar. • Doing incident analysis in detail and solution mapping with knowledge base. • Ensuring quality call handling and call escalation adhering to SLA. • Responsible for SOC tool's monitoring, maintenance and licenses management. • Development of Use cases design, reports analysis and further enhancement • Proactively reviewing and operationalizing threat intelligence to create alerting to detect techniques, tactics, and procedures employed by threat actors. • Responsible for Incident management and changing management process handling.		

	• Collecting the logs of all the network devices and analysis the logs to find the suspicious activities. • Regular compilation and proactive sharing aggressive monitoring reports and daily, fortnightly and monthly reports as well as targeted monitoring updates. • Maintaining current knowledge and understanding of the threat landscape and emerging security threats. • Responsible for Handling and mitigating attacks related to Malware, Viruses, Spoofing, Phishing, Spam and Email Monitoring. • Well versed Understanding of common network services (web, mail, FTP, etc.), network vulnerabilities, and network attack patterns. • Analysis of malicious attacks, incidents, vulnerabilities, Fraud Detection. • Sharing knowledge and providing training to Level 1. • Creating case for the suspicious issue and forwarding it to Onsite SOC team for further investigation. • Experience in performing log analysis and analyzing the critical alerts from a security approach. • Follow Cyber Kill Chain Model to detect and react to Security Incidents. • Ad-hoc reports as and when what client requires, monitoring its health etc. • Tracking, reporting, and controlling incident communications with other teams.
