JOB OBJECTIVE

Software Testing professional with 5 years of experience in manual testing across Agile projects, seeking roles in Manual Testing/QA and Test Automation (Selenium with Java) to deliver high-quality, reliable applications. Preferred location: Bengaluru, Mysuru.

CORE COMPETENCIES

- Quality Assurance
- Software Development Lifecycle
- Manual Testing
- Agile Project Management
- Defect Management
- Test Case Design and Execution
- Performance Testing
- User Acceptance Testing
- Risk Assessment and Mitigation
- Stakeholder Engagement

IT SKILLS

- Selenium
- TestNG
- Decipher XML
- Azure DevOps
- SQL
- ALM
- Jira

PROJECT

• Life Sphere Regulatory Product:

Functional Testing of requirements leading to the defect free development. Improved the overall web-application's functionalities. Involved in development of Test cases, Test Planning and overall SDLC activities.

• PMT Project (Manual Tester):

Executed functional testing and test planning activities, developed detailed test cases, and validated requirements to ensure defect-free development and improved overall web application functionality.

CERTIFICATIONS

- Manual & Automation Testing course from QSpiders

ACADEMIC HIGHLIGHTS

- 2020: B.E. (Electronics) | Instrumentation from RNS Institute of Technology, VTU, Bengaluru, Karnataka

PERSONAL DETAILS

- Date of Birth: 2nd October 1997
- Languages Known: English, Hindi, and Kannada

PROFESSIONAL SUMMARY

- Highly skilled in test case design, execution, and defect lifecycle management, ensuring accurate coverage, early defect identification, and stable releases. Additionally involved in management of test cases using ALM tool.
- Demonstrated expertise in SDLC and STLC processes, including requirement analysis, sanity & smoke testing, black-box testing, and validation across web-based and enterprise applications.
- Proficient in automation fundamentals and tools such as Selenium with Java, TestNG, SQL, and Azure DevOps, supporting continuous quality improvement initiatives.
- Recognized for independently driving testing activities across multiple releases, improving release confidence, and ensuring defect-free deployments.
- Added long-term value through strong cross-functional collaboration, mentoring new team members, and proactively improving test efficiency and overall application reliability, negotiation and relationship building skills.

WORK EXPERIENCE

Jun'25-Jun'26: ArisGlobal, Bengaluru as Quality Engineer-2

- **Test Planning, Design & Execution** - Analyzed software requirements, prepared detailed test scenarios and test cases, and executed Functional, Regression, Integration, and End-to-End testing using ALM across multiple platforms and environments to ensure comprehensive test coverage and software quality.
- **Defect Management & Release Validation** - Managed defect lifecycle by logging and tracking issues in ALM and JIRA with clear documentation and supporting evidence, while performing Smoke and Sanity Testing post-deployment to verify application stability and release readiness.
- **Quality Ownership & Team Enablement** - Independently led testing activities across multiple releases, including requirement estimation, test execution, defect tracking, and troubleshooting, while collaborating in an Agile environment for Life Sciences products and mentoring new team members through technical knowledge-sharing sessions.

Highlights

- Focused on learning Python automation and optimized review processes and ticket formats, reducing overall project delivery time by 30%.
- Built expertise in Web Automation and successfully drove end-to-end quality assurance initiatives, independently leading testing efforts across releases while ensuring timely and high-quality product delivery.

Mar'22-May'25: Umlaut (Part of Accenture), Bengaluru as Junior Software Engineer

- Analyzing requirements and designed detailed test scenarios and test cases, ensuring comprehensive coverage across Functional, Regression, Integration, and End-to-End testing for multiple releases.
- Executing manual test cases and performed smoke, sanity, platform-wide testing to validate application functionality, stability, readiness across environments.
- Managing defect lifecycle activities, including logging, documentation, tracking, troubleshooting, and coordination with development teams within Agile/Scrum Aerospace projects.

Highlights

- Independently led testing efforts across four releases, owning testing deliverables end-to-end and ensuring quality outcomes from the testing perspective.
- Expanded technical capability in web automation using Selenium and Java, while mentoring and training new team members to improve overall testing efficiency and team performance.

Apr'21-Mar'22: Borderless Access, Bengaluru as Survey Programmer

- Designed and deployed low- to mid-complexity surveys, ensuring accurate data capture, structured logic, and alignment with client requirements.
- Maintained data quality and reporting standards by validating survey flows, testing logic, and supporting reliable data analysis for client deliverables.

Highlight

- Streamlined client data collection processes by efficiently launching error-free surveys, contributing to improved turnaround time and high data accuracy.
