~8 Years of Experience | Mumbai, India

PROFESSIONAL SUMMARY

Senior Data Engineer and ETL Developer with around 8 years of experience in enterprise data migration, ETL pipeline development, and cloud data platform delivery — primarily within banking and financial services. Core expertise in Microsoft SQL Server, Azure Data Factory (ADF), SSIS, Snowflake, AWS S3, and Informatica, with strong command of T-SQL and PL/SQL for complex query development, stored procedure optimization, and performance tuning. Experienced in end-to-end ETL design, dimensional data modelling, regulatory reporting, and CI/CD automation for database deployments. Comfortable translating business requirements into scalable technical solutions and working with cross-functional stakeholders in agile environments. Hands on experience in Python and Bash scripting for data processing and automation tasks.

TECHNICAL SKILLS

Data Engineering & ETL

ETL Tools: SSIS • Azure Data Factory (ADF) • Informatica • Control-M

ETL Capabilities: ETL Development • Data Migration • Incremental Loads • Batch Processing

Data Quality: Data Validation • Data Reconciliation • Data Quality Management • Audit Checks

Databases & SQL

Primary DB: Microsoft SQL Server 2016 / 2019 (Core Expertise — 8 years)

Additional DB: Oracle • Snowflake

Query Language: T-SQL (Advanced) • PL/SQL

DB Objects: Stored Procedures • Views • Functions • Triggers • Indexes • Partitioning

Optimization: Query Optimization • Performance Tuning • Execution Plan Analysis • Indexing Strategy

Data Warehousing & BI

DWH Design: Dimensional Modelling • Fact & Dimension Tables • Data Vault • Star Schema • Snowflake Schema

Reporting & BI: SSRS • Power BI • KPI Dashboards • MIS Reporting • Regulatory Reporting

Cloud & DevOps

Cloud Platforms: Microsoft Azure • Snowflake • Azure Data Factory (ADF) • AWS S3 • AWS IAM

CI/CD & DevOps: CI/CD Pipelines • Azure DevOps • Git • GitHub Actions

Tools & Scripting

Tools: SSMS • JIRA • SQL Agent Jobs • Control-M • Task Scheduler • Advanced Excel

Bash Scripting: Shell scripting for file automation, S3 uploads, ETL orchestration, and scheduled batch tasks

Python : Data types, variables, control flow, file I/O — currently working on scripting for data processing, validation, and ETL automation tasks for production-level development.

PROFESSIONAL EXPERIENCE

Senior Data Engineer — Data Migration & ETL — MUFG Pension & Market Services Feb 2021 – Present

Current Project: Cloud Data Migration – SQL to Snowflake Data Migration Pipeline using AWS S3

Objective: Migrate bulk data from Microsoft SQL Server to Snowflake Data Warehouse using AWS S3 as a staging layer. The pipeline is automated using SSIS, Bash, and Python scripts with monitoring, scheduling, and error handling.

Architecture Flow:

SQL Server (SSMS) → SSIS Package Extract → CSV Files → AWS S3 Bucket Upload (Bash + Python Automation) → Snowflake External Stage → COPY INTO Command → Snowflake Tables → Monitoring + Scheduling

Key Contributions:

- Designed and implemented an end-to-end data migration pipeline from SQL Server to Snowflake using AWS S3 as the cloud staging layer, handling high-volume financial datasets.
- Developed SSIS packages to extract data from SQL Server (SSMS) and generate optimized CSV files for downstream cloud loading.
- Automated CSV file movement to AWS S3 buckets using Bash and Python scripts, including upload validation, checksum verification, and error handling.
- Configured Snowflake external stages and developed COPY INTO commands for high-throughput bulk loading of staged S3 files into Snowflake target tables.
- Managed AWS IAM roles, policies, and access keys to securely connect SSIS, Bash, Python, and Snowflake components with S3.
- Implemented scheduling and orchestration using Task Scheduler and SQL Agent Jobs, with proactive monitoring, logging, and automated alerts for pipeline failures.
- Built reconciliation and audit checks across SQL Server, S3, and Snowflake layers to ensure zero data loss and full migration integrity.

Tools & Technologies:

SSMS: Source database management (SQL Server)

SSIS: ETL package creation and CSV extraction

CSV Files: Intermediate data format between SQL Server and S3

AWS S3: Cloud staging storage for migration files

Bash Script: File automation and S3 upload orchestration

Python: Automated upload, validation, and reconciliation

Snowflake: Cloud data warehouse — external stage + COPY INTO

Task Scheduler / SQL Agent: Pipeline scheduling and batch automation

AWS IAM: Access management, roles, and policies

Additional Responsibilities at MUFG:

- Designed and delivered end-to-end ETL and data migration pipelines using SSIS, Informatica, Azure Data Factory, and Snowflake, handling high-volume financial datasets from Oracle and legacy systems.
- Migrated and validated enterprise-scale data from Oracle to SQL Server and Snowflake with full reconciliation, audit compliance, and regulatory sign-off.
- Developed and optimized T-SQL and PL/SQL stored procedures, reducing batch execution time by 30–40% through query tuning, indexing, and execution plan analysis.
- Designed dimensional data models — fact tables, dimension tables, and data vault structures — to support scalable data warehousing and enterprise analytics.
- Built SSRS reports and Power BI dashboards delivering operational, management, and regulatory compliance insights to business stakeholders.
- Implemented CI/CD pipelines for automated database and ETL deployments using Azure DevOps and GitHub Actions, reducing deployment errors by ~50%.
- Automated ETL batch workflows using SQL Agent Jobs and Control-M, improving scheduling reliability and reducing manual intervention.
- Gained strong knowledge of Python scripting through team collaboration — developed working understanding of Python data types, control flow, file handling, and data processing patterns used alongside ETL pipelines.
- Collaborated with business and compliance teams to gather requirements and translate them into technical data solutions.
- Mentored junior developers, led code reviews, and enforced SQL and ETL development standards across the team.

Environment: SQL Server 2016/2019, Azure Data Factory, Snowflake, AWS S3, AWS IAM, SSIS, Informatica, Bash, Python, Power BI, SSRS, Git, Azure DevOps, Control-M, Task Scheduler, Agile

SQL Developer — ETL & BI — D2k Technologies Pvt. Ltd.

Mar 2019 – Jan 2021

- Designed and maintained SQL Server databases for banking and financial applications, covering schema design, stored procedure development, and performance management.
- Built and scheduled SSIS ETL packages for daily and monthly batch processing; monitored job execution and resolved pipeline failures.
- Optimized 50+ SQL queries and stored procedures through indexing, rewriting, and execution plan review — reducing server load and improving report delivery speed.
- Delivered SQL-based MIS and compliance reports ensuring data accuracy and on-time delivery to business and management teams.
- Supported production deployments and maintained technical documentation for ETL workflows and database objects.

Environment: SQL Server, SSIS, T-SQL, SSRS, Control-M

Junior SQL Developer — Humanware Technology Pvt. Ltd.

Jun 2018 – Feb 2019

- Developed and optimized stored procedures, views, and database objects for HRMS application modules.
- Resolved database performance issues through query analysis and structural fixes, improving application response times.
- Integrated data from multiple source systems with validation and consistency checks.
- Provided production support and performed root cause analysis on data and application issues.
- Created analytical reports using advanced Excel functions for HR and management reporting.

Environment: SQL Server, T-SQL, Excel

KEY ACHIEVEMENTS

- Architected and delivered the SQL Server → AWS S3 → Snowflake migration pipeline at MUFG, automating end-to-end data movement with SSIS, Bash, and Python.
- Reduced ETL batch processing time by up to 40% through stored procedure optimization, query tuning, and indexing across SQL Server and Snowflake environments at MUFG.
- Delivered enterprise-scale data migration at MUFG — high-volume Oracle-to-SQL Server and Snowflake migration with full reconciliation, audit compliance, and zero data loss.
- Cut deployment errors by ~50% by implementing CI/CD pipelines for database and ETL releases using Azure DevOps and GitHub Actions.
- Modernized legacy on-premise ETL workflows to Azure Data Factory and AWS-based cloud staging, improving scalability, maintainability, and reliability of enterprise data pipelines.
- Recognized across engagements for ownership, delivery reliability, and cross-functional collaboration on complex migration and regulatory reporting projects.
