Professional Summary

Results-driven Software Developer with around 3 years of experience specializing in **ASP.NET, .NET Core, MVC, C#, SQL Server, Web API and REST APIs**. Skilled in designing **scalable backend architectures**, integrating third-party services, and building secure, high-performance applications. Proven track record of delivering enterprise solutions in domains such as ticketing systems, security management, visitor management, and monitoring platforms. Strong collaborator with experience in Agile development and cross-functional teamwork.

Experience

ATT Systems India Pvt Ltd - Software Developer

June 2023 – Dec 2025

- Designed and developed backend modules for enterprise systems using **ASP.NET (Core/4.8 /8), MVC, and C#**.
- Implemented **SQL** queries, **LINQ**, and **Entity Framework** to optimize database performance and ensure data integrity.
- Built REST APIs to support scalable, modular, and secure system integrations.
- Applied **Clean Architecture** principles for maintainable and scalable system design.
- Integrated third-party services and tools such as **SignalR** and **RabbitMQ** for real-time event streaming.
- Ensured cross-platform compatibility, optimized performance, and improved overall system efficiency.
- Developed responsive UI components using Razor, Bootstrap, HTML, CSS, and JavaScript to enhance user experience.
- Contributed to Blazor-based prototypes, enabling faster development of interactive single-page applications.

Technical Skills

- Backend & Frameworks:** ASP.NET, MVC, .NET Core, Entity Framework, REST API, Web API, Blazor, Clean Architecture.
- Frontend:** HTML, CSS, JavaScript, Razor, jQuery, Bootstrap.
- Messaging & Background Services:** Worker Services, Window Services, RabbitMQ, SignalR.
- Databases:** MS SQL Server, PostgreSQL.
- Hosting & Tools:** IIS, Microsoft Visual Studio 2019/2022.
- Programming Concepts:** Object-Oriented Programming (OOP), Agile/Scrum.

Projects

AMANDA (Activity Monitoring and Alert System) – PUB, Singapore

- Developed a system to actively monitor **construction and maintenance site activities** in real time.
- Integrated automated alerts that reduced incident response times by **25%**, ensuring safety compliance.
- Enabled PUB to track and analyze on-site activities through a centralized dashboard.

VMS-SFA (Visitor Management System) – Singapore Food Agency

- Created a **visitor registration and access control platform** with cloud-based integration.
- Strengthened on-site security and regulatory compliance by **digitizing visitor logs and approvals**.
- Provided real-time monitoring of visitor movements, improving transparency and reducing risks.

ISMS (Integrated Security Management System) – Singapore

- Designed a **centralized security platform** integrating access control, alarms, and surveillance across multiple facilities.
- Enabled **real-time monitoring and alerts** by connecting SEMAC controllers with event-driven notifications.
- Improved security responsiveness by **50%** with event streaming and dashboard-based monitoring.
- Delivered a scalable system architecture to support future expansions in security infrastructure.

Education

KLE Institute of Technology

B.E in Electronics and Communication Engineering (2017-2021) | 7.7 CGAP

Hubli, Karnataka
