## **QA TEST MANAGER | SENIOR PERFORMANCE TEST/ENGINEERING MANAGER | SRE**

Results-driven IT professional with 18+ years of extensive experience in **Software QA Project Management, Performance Testing/Engineering, Software Testing, Agile Testing** and **Site Reliability Engineering (SRE)**, **AI driven automation using tools Codex & GHCP, CI/CD & DevOps Collaboration**. Adept at leading end-to-end QA project delivery, encompassing **project setup, application and environment configuration, test execution, and reporting**. Proven expertise in driving quality initiatives, ensuring seamless project execution, and optimizing testing strategies for enhanced performance and reliability.

- **Areas of Expertise:** Performance Testing/Engineering | Performance Monitoring & Diagnostics | Automation | Project Management | Functional Testing | SAP ECC/S4Hana Performance testing | Non-Functional Testing Strategy
- **Tools:** LoadRunner | Performance Center | Jmeter | HP ALM | Dynatrace, AppDynamics NewRelic, DataDog | Splunk | Grafana | SAP Performance Diagnostics | AWS & Microsoft Azure Cloud | AI Automation framework/landscape | AWS EC2, Lambda, CloudFront & CloudWatch | Kubernetes architecture experience | **Leveraging AI tools Codex, GHCP AI Agents**
- **Domain Exposure:** Retail | Financial Services | Manufacturing | Digital Services | Consumer Retail | Automation | Banking | Government | Insurance | Healthcare | Supply chain | Telecom | Media & Communications
- **Onsite Experience:** Deployed to various client locations in USA & Australia where I collaborated with diverse teams to drive project deliverables and enhance client relationships
- **Certifications:** Certified Application Lifecycle Management | Certified LoadRunner/ Performance center Professional AIS | QA Practice IIities certified (ISTQB equivalent)
- **Education:**
  - **Bachelor of Engineering** Electronics & Instrumentation – Gulbarga University Kalaburgi Karnataka India

## **EXECUTIVE SUMMARY**

**Technically adept and versatile IT professional** with cross-functional expertise gained from leading roles in **globally reputed organizations** across **diverse industry segments and geographies**.

Possesses specialized skills in:

|                                      |                                        |                                        |
|--------------------------------------|----------------------------------------|----------------------------------------|
| Performance Testing & Engineering    | QA Test Management                     | CI/CD & DevOps Collaboration           |
| Agile/Scrum Methodologies Process    | Project Governance & Implementation    | Onshore/Offshore delivery models       |
| Automation & Performance on cloud    | Global Customers Account Engagement    | Project Planning, Monitoring & Control |
| Risk/Issues/Change Management        | Business Relationship Management       | Training & Development                 |
| Globally Distributed Team Leadership | Project Initiation & Client Engagement | Tools POC                              |
| SRE – Site Reliability Engineering   | AI-Assisted Automation Initiatives     | Resource planning & estimation         |

## **CARRIER PROFILE**

- 
- **Capgemini** as Manager - Mar 2021 to till date
  - **TekArch** as Consultant – Feb 2020 to Feb 2021
  - **ACCENTURE** as Associate Manager from Sep 2012 to Jan 2020
  - **TCS** as Associate Consultant from Mar 2011 to Aug 2012
  - **Wipro** as Assistant Consultant from Apr 2006 to Mar 2011

## **AWARDS:**

- 
- “Client Champion” award received for successful release and delivery of ebay projects (Accenture ACE award)

- “TEAM Excellence Award” for successfully completing the IAV3.0beta release within schedule and as per customer expectations.
- “PARTNER AWARD” for excellent commitment & contribution towards testing of ‘Honeywell InstantAlert’
- “SPOT AWARD” for Honeywell InstantAlert stable & successful product release

## EXPERIENCE / PROJECT WORK

---

### **Organization: Capgemini Technology services [Mar 2021 to Till date]**

#### ***Technical Manager***

#### **Project delivery responsibilities:**

A performance engineering specialist with a proven track record of enhancing enterprise solution performance. Experienced in providing technical leadership, strategic direction, and expert guidance on performance and scalability challenges across a diverse project portfolio. Lead the performance /load/ stress & endurance tests delivery that includes QA & Software testing / operational & nonfunctional acceptance testing as part of the delivery workforce for various CMT, Retail and banking clients with the following responsibilities:

- Define & design performance test strategy/test plan, workload model, test data creation, test (Load, Scalability, Endurance, Stress, and Volume), analyze, identify bottlenecks, recommend solutions that includes client interaction and team management on daily basis
- Define and Initiate early functional non-functional & regression tests
- Stakeholder Management – Client and internal team of consultants, client presentations
- Requirement scoping, estimation, workload analysis for the critical business scenarios for Performance test / for hardware component alerts, Application server alerts and lead the onshore / offshore initiative
- **Rich experience in preparing test plans, test strategies, test cases, test scripts, execution of test cases**, logging defects into test management systems and providing varies project status reports to the management.
- Core competencies in **managing end to end project deliveries of testing of large scale, multi-disciplinary**, complex and critical programs in a timely manner involving transparent communication with all stakeholders at all phases.
- **An assertive leader capable of leading and mentoring global project teams** (engineering and professional services teams) spread across different geographical locations while ensuring judicious resource allocation and utilization.
- Contribute to Resourcing, Training, Knowledge Management, Skill Retention, Performance Appraisal, Performance Test process, Continuous Improvement, Test artifacts and templates, Test methodology, Status reporting, Metrics etc
- Coordinate with the Test Leads/Analysts, Cross functional teams, Third party vendors to set up tests that accurately profiles systems performance and functionality
- Work order management - Review the work orders and follow-up on commercials

#### **Projects worked in Capgemini**

T-mobile

COX – CHAMP

Charter – as SRE professional

Versant Media

### **Organization: Accenture [Sep 2012 to Feb 2021]**

#### ***Software Engineering Associate Manager***

Accenture Solutions Pvt. Ltd.

#### **Delivery Responsibilities:**

Lead the test delivery that includes QA & Software testing / Operational Acceptance testing & Performance Testing and Performance Engineering as part of the delivery workforce for various CMT, Retail and banking clients with the following responsibilities:

- Contributed strategic inputs in defining and implementing test processes, strategies and approaches based on development methodology for medium complexity test requirements.
- Define & design test strategy/test plan, test scripts design, test data creation, test (Load, Scalability, Endurance, Stress, and Volume), analyze, identify bottlenecks, recommend solutions that includes client interaction and team management on daily basis
- Managing and actively participating in the test defect resolution process; provide defect descriptions, root cause, scope, risks and impact of a problem and facilitating defect reviews.

- Key Player in developing, implementing and maintaining test plans, procedures, guidelines, standards and processes on the project and documented test results in a test report.
- Mapped client's requirements and provided them best solutions involving evaluation and definition of the scope of the project and finalization of the project requirements.
- Involved in the entire test execution phase which involves System, System Integration and Functional Testing along with Regression testing and End-to-End testing of the applications.
- Responsible for leading a team of software testers comprises of both Manual and Automation Testers and also supervised their work. Motivated the team in achieving the set-up goals and targets.
- Prepared extensive system level functional scenarios and detailed test cases for extensive coverage of functionality of the application according to the business requirements/user stories.
- Prepared System, Test Plans & Test Metrics presentations, designed Test Scenarios, Test Reviews also prepared Test Data.
- Created the documents for project deliverable and non-deliverable list, project defined procedure, requirements & scope documents, project measurement & communication plan, project quality management plan, risk management plans, etc.
- Contribute to Resourcing, Training, Knowledge Management, Skill Retention, Performance Appraisal, Performance Test process, Continuous Improvement, Test artifacts and templates, Test methodology, Status reporting, Metrics etc
- Coordinate with the Test Leads/Analysts, Cross functional teams, Third party vendors to set up tests that accurately profiles systems performance and functionality
- Lead test executions to identify the bottlenecks by driving the bridge having the relevant stakeholders and suggest appropriate solutions in performance testing across the web/app/DB tiers/latency/load balancers
- Conduct Risk Assessments and Performance test audits for testing projects as part of TCoE initiative
- Lead the Test results analysis, systematic optimization and tuning of application systems in consensus with the capacity / DB and server teams
- Team Management - Lead a team of leads and analysts
- Work order management - Review the work orders and follow-up on commercials
- Participate and drive the internal and external recruitment on the outcome of the demand generation calls
- Lead team, performance appraisals, escalations for faster resolutions as part of PTCOE framework with appropriate status reports
- Demonstrated ability in managing complex client engagements, identifying and articulating ambiguous client issues, problem definition, disciplined project/people management and hands on thought / content leadership through the engagement life-cycle

### ***Software Engineering Associate Manager***

Accenture Services Pvt. Ltd.

#### **Project Description/Scope: ALSC Performance Remediation**

ALSC - Accenture Life Sciences Cloud product (ALSC) is a product initiative taken by Accenture to increase R&D productivity, to support a multi-Clinical Research Organization (CRO) Alliance Partner (AP) operating model for much of its clinical trial operations. Alliance Partners to use their own clinical applications to conduct studies. The success of the new model is dependent on having data from the various transactional systems, aggregated and integrated in a centralized repository (i.e. CSDW) and readily accessible to appropriate business users. The Accenture Life Sciences Cloud (ALSC) constitutes the integrated set of components required to collect, aggregate and enable user to access the clinical study data using browsing tools (i.e. Spotfire, J-Review, OBIEE, Oracle R,SAS) and allow clinical scientific programmers to generate SAS reports for FDA regulatory submissions during the research and development process

#### **Responsibilities/Deliverables:**

- Worked as SME support for testing methodology/ approach design, test strategy & plan preparation.
- Conducted meetings and discussions with various project stakeholders and defined the workload model for performance testing
- Collected production peak volumes for confirmed performance scenarios and estimated individual scenarios volumes.
- Prepared and reviewed manual test cases, get it reviewed and approved by client team.
- Developed and customized performance test scripts using LR.
- Executed Load test scripts with various loads for incremental Load testing, volume testing and Stress testing.
- Monitored and captured performance statistics of various systems components.
- Collected statistics and analyzed and reported the performance test results
- Conducted the performance engineering activities deep dive bottleneck analysis using APM tools

Dynatrace.

- Identified performance bottlenecks and reported defects
- Conducted defect triage meeting with Dev/Ops teams.
- Achievements: Successful integration of functional and performance testing.

**Project management activities includes:**

- Resource planning and resource utilization based on work forecast, understanding the project requirements, coordinating with development application team, data base team, server administrators to resolve the issues. Preparing and maintaining all the performance testing projects related documents and metrics
- Preparing and maintaining all the performance testing projects related documents and metrics
- Scheduling and monitoring the tasks allocated to the team members. Identify the risks and Mitigating the risk through corrective, contingency and preventive actions
- Maintaining quality standards, process and procedures. Taking up the corrective and preventive actions in all phases of Performance testing
- Planning and providing the training on tools, application technologies to the team members to improve their technical skills. Develop and maintain version controls the systems documentation such as user manuals, technical manuals, description of application operations and methodology documentation as per the standards

***Software Engineering Associate Manager***

Accenture Client - eBay Enterprises/GSI commerce (eBay Inc. division)

**Project Description/Scope:** eBay PE services

GSI commerce is an eBay enterprise company specializing in creating, developing, and running e-commerce web stores, B2B models & integration services. GSI helps in setting up online stores with backend order management system for clients. Technology includes mainly java.

**Technologies/Tools:** Performance Center 11.04, ALM, Java/.net and Putty, WPT client side performance testing, DynaTrace diagnostic tool

**Responsibilities/Deliverables:**

**Delivery Responsibilities:**

- Prepare test scope & objective after understanding customer needs & requirements. Conducted various discussions & meetings with stakeholders.
- Prepared and reviewed test strategy, plan, work load model, & get stakeholders approval.
- Prepared and Reviewed test Scripts using Performance Center (VuGen) tool and get the test scripts approval from application/dev team.
- Designed test scripting framework for continuous releases to minimize the scripting effort for repeated business scenarios.
- Conduct different load tests using Performance Center tool and share test results, get approval from Engg /DMS/Apps teams.
- Highlight risks and Business Impact of failure reported during testing

***Software Engineering Associate Manager***

Accenture client - Target Canada (Target Inc.)

**Project Description/Scope:** Target Canada R3 Expansion

New deployment of Target stores in Canada. SAP ECC is an SAP application developed for "Target Canada" for enterprise wide application implementation

**Technologies/Tools:** HP Load Runner 11.5, CA Wily, HP MOF, SAP ECC, SM (Solution Manager), SRM, PLM (web), SAP GUI ECC, MM & SD modules

**Responsibilities/Deliverables:**

- Understand the Non-Functional requirements (NFR), SAP landscape, and scope
- Understand SAP implementation phases and iterative based sizing & design
- Prepared end user business flows for t-codes based on discussion with solution experts and SMEs
- Identified and prepared data requirements and dependency t-codes.
- Prepared and reviewed Test Model and Test Approach.
- Creating the test scripts based on end user transactions using SAP GUI, Web HTTP/HTML protocol and customized scripts

- Design and execute the scenarios as defined load in test plan document
- Monitor test execution with dev teams, basis team & SM teams.
- Prepare and publish test results report.
- Prepared Summary report for the Weekly client call
- Assigning daily task to the team members as per the test plan & follow up
- Sending daily status to the Onshore and Offshore team management on the task completed.
- Follow up of Trackers & SIR's till their closure.

### **Organization: TCS [March 2011 to Aug 2012]**

#### ***Associate Consultant***

#### **CBA (Common Wealth Bank of Australia)**

**Project Description/Scope:** FX Trade application, WSS, performance testing

**Environment:** WSS FX/MM core, BSIP, Interface services, integrated mode, Web services

Performance testing included CBA's trade application Wallstreet FX (WSS FX) & BSIP which includes spot, swap, future FX, deal/contract for loosely coupled com/dcom based. CBA decided to replace legacy systems (GT) global foreign exchange & money market with a new fully integrated front to back systems. The new systems were incorporated to deliver a new front to back, multi-currency & multi entity system for bank's foreign exchange and money market operations.

#### **Delivery Responsibilities:**

Performance test plan & strategy preparation, scope identification for WSS integrated & standalone landscape. Performance Scripts Creation, Review, (Load, Scalability Testing, Stability Testing), Report Generation, Analysis, Conduct daily status meetings. Handled team management, work allocation & monitoring & ensuring quality delivery. Preparing and maintaining all the performance testing projects related documents and metrics.

#### ***Associate Consultant***

#### **EMC Propel: SAP Application performance testing**

**Tool:** Worksoft Certify Performance Test Tool

**Environment:** SAP (ECC, PLM)

SAP Propel application includes GUI ECC, SRM, SCM, & Web PLM. Propel is IT imitative new generation ERP implementation. SAP landscape includes five functional modules i.e. OTC, R2R, IM, PD, P2P.

#### **Delivery Responsibilities:**

Performance strategy preparation, scope identification for SAP landscape. Performance Scripts Creation, Review, (Load, Scalability Testing, Stability Testing), Report Generation, Analysis, Conduct daily status meetings. Preparing and maintaining all the performance testing projects related documents and metrics.

### **Organization: Wipro Technologies**

**[April 2006 to Mar 2011]**

#### **Client Nike Inc. USA**

#### **Projects:**

- ♦ Nike Store application Performance Testing and Tuning (Agile based testing)

**Tool:** LoadRunner, Gomez

**Environment:** Windows 2003 server, Jboss App server, Unix box, Oracle 9

Nike store application is e-commerce B2C shopping web application. Users can order various apparel, shoes, inline products, Golf, ColeHaan and iD products from Nike store. Integrated with payment gateways and digital gift card service.

Performance testing done on Agile methodology, phase based test execution. Involved in agile showcase, metrics preparation.

- ♦ Elite Client Services (Nike ECS)

**Tool:** LoadRunner

**Environment:** Windows 2003 server, Jboss App server, Unix box, Oracle 9

ECS project provides benchmark customer service to Nike sponsored athletes, and enable Nike to move to the next level of service and deepen consumer relationship by leveraging technical resources (SAP, ATG, STATS and Nike.com/One Store) to build a competitive advantage. Users can order inline, Golf, ColeHaan and iD products from ECS.

- ♦ DAS Migration (Nike DCIT)

**Tool:** LoadRunner, Gomez real time monitoring.

**Environment: Jboss App server on Solaris box, Oracle 10g, ATG framework**

DAS Migration project involves migration of core retail application migration to new platform. Also involves migration of hardware and software. Software migration Dynamo application server to JBOSS application server with Apache web server. As part of this migration applications involved for Performance testing were Nike Store, Nike Plus & Cole Haan. Performance testing conducted on baseline version and on migrated environment.

**Roles & Responsibilities for all the above projects**

- The main responsibilities in testing include Resource planning and resource utilization based on work forecast, understanding the Project requirements
- Preparation of test plan, coordinating with Development application team, Data base team, Server Administrators to resolve the issues.
- Agile methodology incorporation for above few projects. Performance test planning done aligning with agile development methodology.
- Preparing and maintaining all the testing projects related documents and metrics.
- Scheduling and monitoring the Tasks allocated to the Team members. Identify the Risk and Mitigating the risk through corrective, contingency and preventive actions
- Maintaining Nike - Wipro Quality standards, process and procedures. Taking up the corrective and preventive actions in all phases of Performance testing
- Participating in the Project Progress Meetings with the Developments application team and with the senior management to make necessary planning and to take steps to meet the targets as per planned.
- Planning and providing the training on tools, application technologies to the team members to improve their technical skills. Develop and maintain version controls the systems documentation such as user manuals, technical manuals, description of application operations and methodology documentation as per the standards.
- Reviewing and validating the Test results and test reports and final reports for the respective engagements carrying out the Team members. Providing the Conclusions and recommendations for all the performance testing engagements to the clients to fine tune their application performance before going live.

**Manual and Functional Testing Project:**

Managed both automation testing and manual testing teams. The Main Responsibilities in manual and automated testing includes

- Resource planning and resource utilization based on work forecast.
- Creating / updating Testing related work product and other documents.
- Test Planning and preparation of testing schedules based on project timelines.
- Analyze the type of testing to be performed (Manual / Automated) based on the re-usability of test scripts.
- Working with the developers and SMEs in creating meaningful test data.
- Guiding the team in Preparation of Test Cases and Test Scripts and Traceability between Requirements to Test Cases/Scripts.
- Creating a process for sharing defects with the developers and Subject Matter Experts.
- Coordinating with the testers and developers in resolving the testing defects.
- Planning on regression testing for needed modules based on the amount defects.
- Preparation of Test Summary Report/Validation Report.

**Client: Optus Australia****Projects:****♦ IFSM (Injection Fault Management System)****Tool: LoadRunner**

IFMS (Injection Fault Management System) is Optus' fault management system which allows tracking of network and customer faults across all products. It was built in-house by Optus using Web Technologies mainly Java platform. It allows Customer Service Representatives or repair staff at the BOC, NMC, etc, to record problem reports, either as described by a customer or as observed by Optus staff. The system is then used to manage the problem through several stages.

**♦ Various other projects at Optus Australia**

SoftAct (Order provisioning on Network elements)

WAM (Web Account Management)

Focus (Order Capture Front End application)

OBD CRM (Optus Business Direct – CRM Application)

Clarity Upgrade – Performance Testing  
LNP Staffware - Performance Testing  
Optus Wholesale Extranet Gateway – Performance Testing  
IBS Telecom Portal Performance Testing

The Optus engagement involves the performance testing and tuning of Optus telecom OSS & BSS internal and external applications and these applications are related to the Services, network and financial domains in different technologies like Web, Siebel Analytics, Oracle Apps, Oracle 11i, Java & J2EE etc

**Roles & Responsibilities for all the above projects**

1. Working as PM for all the above projects
2. Co-ordination with onsite and offshore team
3. Training offshore shore people on Load Runner, once the team is well trained on Load Runner, getting the work done from the team
4. Preparing the test plan and test design activities based on the requirements
5. Analyzing the Performance Testing requirements.
6. Identifying the Performance Testing scenarios
7. Preparation Performance Test Plan & Test Strategy.
8. Enhancement of the scripts like parameterization and co-relation.
9. Scheduling and Running the scenarios using Load Runner Controller.
10. Creation of Scenarios in Controller based on the requirements and running the scenarios.
11. Involved in Scripting Involved in preparing the status update documents and presenting the same to the client.
12. Initiated and maintained higher level of interaction with Customers for their Service requests.
13. Better understanding of the customer requirements with direct client interaction.
14. Preparation of WSR's and circulating to the client and to the team
