Quality Engineering & Test Automation Leader | GenAI-Driven Testing | Performance & Scalability Expert

Professional Summary

Performance Engineering Leader with 13+ years across trading, insurance, banking, and healthcare — specializing in NFR strategy, workload modeling, and SLA/SLO governance. Hands-on expertise across LoadRunner, JMeter, K6, Dynatrace, Splunk, and Prometheus on AWS, Azure, and GCP. Pioneered GenAI-driven workflows including RAG-based AI Assistants (Azure OpenAI, LangChain) and agentic log mining that cut RCA time by 40% and script authoring effort by 50%+. Proven technical leader in chaos engineering (Gremlin, AWS FIS) and embedding continuous performance validation into CI/CD at scale.

Technical Skills

AI & GenAI: LLMs, RAG Pipelines, AI Agents, Prompt Engineering, Azure OpenAI, LangChain, PromptFlow, Agentic Automation

Performance Engineering: LoadRunner (Cloud & Enterprise), Apache JMeter, K6, Gatling, NFT Strategy, Workload Modeling, Capacity Planning, SLO/SLA Governance

Chaos & Resilience: Gremlin, Chaos Mesh, AWS FIS, Steadybit, Fault Injection, Resilience Testing

Observability & Monitoring: Dynatrace, Splunk, AWS CloudWatch, Azure Monitor, Prometheus, Grafana, ELK Stack, APM, Distributed Tracing

Cloud & DevOps: AWS, Microsoft Azure, GCP, Docker, Kubernetes, Azure DevOps, Jenkins, GitHub Actions, CI/CD Integration

Programming: Java, Python, C++, PowerShell, Bash, SQL

Databases & OS: Oracle, SQL Server, MySQL, Windows, Linux

Leadership: NFR Governance, Test Strategy, Team Mentoring, Stakeholder Management, Agile/Scrum, Cross-functional Collaboration

Professional Experience

Performance Test Lead

May 2025 – Present

Capgemini – Intact Insurance (India)

- Serve as offshore lead managing end-to-end performance engineering deliverables across RSA platforms, owning strategy, governance, and executive reporting.
- Built AI-driven agents for automated log mining, anomaly detection, and root cause analysis (RCA), reducing analysis time by **40%**.
- Integrated GenAI copilots to auto-generate test scripts, workload models, and capacity planning insights, cutting script authoring effort by **50%+**.
- Developed a RAG-based internal Performance AI Assistant using **Azure OpenAI** and **LangChain**, providing real-time tuning guidance and SLA breach predictions.
- Led API and UI performance testing using LoadRunner Cloud and WebMethods within CI/CD pipelines, ensuring all NFRs are validated continuously.

NFT Subject Matter Expert (SME)

Jan 2023 – May 2025

Capgemini – The London Metal Exchange, UK

- Led performance and resilience engineering across mission-critical, high-volume, low-latency backend systems powering multi-dealer FX trading workflows.
- Defined and executed comprehensive performance test suites — soak, load, stress, endurance, concurrency, and throughput benchmarking — at sub-millisecond thresholds.
- Validated **FIX Protocol** message flows covering order routing, trade execution, market data, and end-to-end message lifecycle performance.
- Enabled deep observability and rapid RCA through integration of **Dynatrace, Splunk, and CloudWatch**, reducing MTTD by **35%**.
- Championed performance SLAs; aligned cross-functional teams (product, engineering, SRE) to meet NFRs and influenced architectural decisions.

NFT Lead

Oct 2021 – Dec 2022

Capgemini – RSA Claims / Guidewire (UK)

- Owned NFR strategy across enterprise Guidewire implementation; delivered workload models and performance automations using **LoadRunner Cloud, JMeter, and K6**.
- Performed detailed RCA influencing infrastructure and design decisions; integrated Dynatrace for continuous deep observability and rapid performance diagnostics.

Performance Test Lead

Apr 2018 – Sep 2021

Capgemini – FICOH (India)

- Developed, maintained, and scaled performance test automation frameworks for Guidewire platforms, ensuring enterprise-level SLAs across release cycles.
- Conducted advanced load, stress, and scalability testing across **AWS and Azure** cloud environments; collaborated with infrastructure teams to evolve testing standards.

Performance Test Lead
Capgemini – Willis Towers Watson (India)

Dec 2016 – Apr 2018

- Developed test strategies, scripts, and analysis frameworks; delivered DB profiling and performance tuning recommendations that improved query response times.
- Coordinated onshore-offshore operations and mentored junior engineers, growing team capability and delivery throughput.

Senior Performance Tester / Associate Test Lead
QualityKiosk – RBL Bank & Clients (India)

Jul 2015 – Dec 2016

- Designed automation and conducted NFR testing on critical banking applications; managed defect workflows, test data setup, and executive status reporting.
- Trained junior engineers on LoadRunner and performance frameworks; created test measures from requirements and stakeholder interviews.

Performance Test Engineer
Tata Consultancy Services (TCS) (India)

Dec 2011 – Jun 2015

- Executed end-to-end performance testing, scripting, and reporting using LoadRunner for enterprise banking and insurance clients.
- Led client communications, knowledge-sharing sessions, and onshore-offshore coordination; mentored new team members on tooling and methodology.

Education & Certifications

B.E. – Computer Science & Engineering
Rajiv Gandhi Technical University, Jabalpur 2007 – 2011

- Certifications**
- Gremlin Certified Chaos Engineering Practitioner
 - HP LoadRunner Certified Professional
 - ITIL Foundation Certified
 - Agile Foundation Certified
 - CA LISA Virtualization Foundation

Industry Domains

Trading Platforms (FX / Capital Markets) • Insurance (Guidewire) • Banking • Healthcare

Key Achievements

- **40% Faster RCA:** Built AI-driven agents for automated log mining and anomaly detection at Intact Insurance, slashing analysis time from hours to minutes.
- **35% MTTD Reduction:** Designed unified observability stack (Dynatrace + Splunk + CloudWatch) at LME, enabling near-real-time detection of performance regressions.
- **50%+ Effort Savings:** Pioneered RAG-based Performance AI Assistant and GenAI copilots, reducing script generation and capacity planning effort significantly.
- **Low-Latency FX Trading:** Validated sub-millisecond order execution and FIX Protocol message flows for multi-dealer FX trading at The London Metal Exchange.
- **Enterprise Chaos Engineering:** Championed Gremlin and AWS FIS adoption across cloud workloads, proactively surfacing and eliminating failure modes before production impact.
