

VIDHYA SUBRAMANI

Senior Performance Engineer

+91 8883341616 | vpsvidhya99@gmail.com | [linkedin.com/in/vidhya-subramani/](https://www.linkedin.com/in/vidhya-subramani/)

PROFESSIONAL SUMMARY

Senior Performance Engineer with nearly 6 years of experience in Performance Engineering, specializing in designing and executing enterprise scale performance testing solutions for SAP applications and distributed enterprise systems. Expertise in Performance Test Strategy, NFR analysis, workload modelling, LoadRunner scripting, infrastructure performance analysis, capacity planning, bottleneck identification, and production readiness validation.

TECHNICAL SKILLS

Performance Testing	LoadRunner, JMeter, Apica Zebra Tester, Load Testing, Stress Testing, Spike Testing, Soak Testing, Baseline Testing, Benchmark Testing
SAP Platforms	SAP S/4HANA, SAP Fiori, SAP EWM, SAP MDG, SAP Fieldglass, SAP RISE
Monitoring & Diagnostics	Grafana, SAP Traces, Application Logs, Root Cause Analysis
Protocols and APIs	HTTP/HTML, Web Services, REST APIs, OData, SOAP, Postman, SoapUI

WORK EXPERIENCE

Senior Quality Engineering Analyst | ACCENTURE Client - Google

JUNE 2023 - PRESENT

- Delivered comprehensive performance engineering across key SAP platforms including S/4HANA, SAP Fiori, SAP MDG, SAP EWM, SAP Fieldglass supporting critical business functions such as procurement, vendor management, master data governance and warehouse operations for a large scale global client (Google)
- Developed and maintained scalable, reusable LoadRunner scripts for complex **SAP EWM** business flows including **Inbound and Outbound processes by conducting** Load and Stress tests to identify and resolve data processing bottlenecks, high response time issues and collaborated with development teams to resolve **code inefficiencies** to improve application performance.
- Designed production-representative workload models and LoadRunner Controller scenarios covering 1,500 concurrent users and 500+ SAP business transactions, validating response-time SLAs, throughput, stability, and scalability.
- Executed performance testing & optimization for SAP FIORI launchpad and SAP s/4 HANA backend services achieving **30% improvement** in system stability, throughput and overall reliability in production-like environment.
- Conducted **NUMA Node analysis, Scale-up Evaluation**, and capacity assessments to identify application and infrastructure bottlenecks, performed **Root Cause Analysis (RCA)** by correlating application logs, monitoring dashboards, workload statistics, and performance metrics, and collaborated with **SAP Basis, Infrastructure, Database, and Development teams** to recommend performance tuning, optimize resource utilization, validate SLA compliance, and deliver comprehensive performance reports with actionable optimization recommendations.
- Actively worked in **SAP RISE migration** by benchmarking pre- and post-migration performance to certify production readiness.
- Actively participated in release **planning, defect triage, production readiness reviews, and Go-Live support activities** to ensure performance quality across releases. Received **client appreciation** for proactively identifying critical performance bottlenecks, infrastructure limitations, and functional issues prior to production deployment.

Performance Engineer | Cognizant Technology Solutions
Client - MetLife

DEC 2020 - MAY 2023

- Designed and executed performance tests for enterprise insurance applications using Apica Zebra Tester.
 - Developed scripts for HTTP/HTML and web-service workloads, including parameterization, correlation, validation, and test-data handling.
 - Executed baseline, benchmark, load, stress, spike, and endurance tests based on production usage patterns and business workload models.
 - Analysed response time, throughput, error rate, resource utilization, and infrastructure behaviour to identify performance risks.
 - Collaborated with application and infrastructure teams to validate fixes and improve application response time.
 - Supported release validation and production readiness for multiple application deployments.
-

EDUCATION

B.E in Computer Science
Kongu Engineering College

JUL 2016 - APR 2020

KEY ACHIEVEMENTS

- 30% increase in SAP system efficiency and reliability - Google
- 40% improvement in SAP Data accuracy through proactive bottleneck identification and RCA
- Delivered SAP Field glass SLA benchmarking under strict timelines
- Identified critical application and infrastructure constraints before production deployment, preventing potential go-live performance issues.
- Received client appreciation for proactive bottleneck identification, RCA, and cross-team coordination.
