Career Objective

To be a dedicated AI professional within an organization that fosters innovation and offers challenging roles, providing opportunities for continuous learning and self-development. I aim to contribute to success by leveraging expertise in AI, GenAI, RAG, LLMs, NLP, MLOps, Azure, and ML System Design alongside my technical and managerial skills.

Professional Summary

With around 8 years of experience as an AI Engineer and Data Scientist, I specialize in AI algorithms, including recommendation systems, classification, regression, and information extraction. My core expertise includes Generative AI (GenAI), Retrieval-Augmented Generation (RAG), Large Language Models (LLMs), MLOps, Azure AI, NLP, and ML System Design, where I have consistently developed and deployed cutting-edge AI solutions across diverse industries.

Roles and Responsibilities

- ✓ Analyze and define machine learning problem statements based on business requirements.
- ✓ Collaborate with clients to gather data and apply feature engineering for validation.
- ✓ Perform exploratory data analysis (EDA) to identify insights and select appropriate algorithms for model development.
- ✓ Validate and deploy models, ensuring reliability, and present results and solutions effectively to clients.

Technical Skills

Technologies: GenAI, RAG, LLM Frameworks(OpenAI, LangChain), Agentic Frameworks(CrewAI, LangGraph), FineTuning, Prompt Engineering, Transformer, BERT, Time Series, RNN, Boosting & Bagging Techniques, Transfer Learning, NLP Techniques (Text Summarization, Topic Modelling, NER), Standard ML, DL and Clustering Algorithms, DSA, System Design, GIT, APIs

Programming Languages: Python(Primary) & C#, Java, C++(Secondary)

Frameworks: VS Code, TensorFlow, Keras, Spacy, NLTK, MLFlow, PySpark, Open CV, Copilot Studio

Cloud Technologies: Azure, AWS

Databases: Postgre, Snowflake, MySQL

Deployment Softwares: Azure, Kubernetes, MLOps

Professional Experience

LTIMindtree, India(Apr, 2025 – Present)

- Built a scalable, production-ready Advanced RAG application with semantic search, vector retrieval, citation based responses and conversational AI capabilities on Azure.
- Implemented Azure AI Landing Zones to provision scalable, secure and production ready

infrastructure, incorporating Zero Trust networking and governance, for enterprise AI applications.

- Implemented agentic ai usecase using LangChain, LangGraph and CrewAI.
- Part of a team to develop genAI based solution to generate subtasks for the given business cutover plans leveraging prompt engineering, llm, python, Azure.
- **Technologies:** Python, RAG, LLM, GPT, LangChain, Azure, Bicep, Terraform, IaC, LangGraph, Docker, Kubernetes, CI/CD, Prompt Engineering, CrewAI, REST APIs, GIT.

Tech Mahindra, India, Finland (Feb 2024 – Mar 2025)

- Developed a RAG based application that enabling users to interact seamlessly with their organization's internal data through conversational AI, enhancing data accessibility and insights.
- Part of a team that developed a RAG based chat bot that automates risk prediction for construction projects, eliminating manual effort by identifying risks, evaluating solutions, and estimating associated costs based on project details.
- Developed a cash flow forecasting model for a construction company to predict optimal spending across multiple countries, driving profit growth, maximizing resource efficiency, and improving overall business financial performance.

Technologies: RAG, LLM, GPT, Azure, Python, Linux, Git, SQL, Time Series Algorithms

Wipro Limited, India (Oct 2021 – Feb 2024)

- Developed and optimized a Boosting based document classification model for accurate identification of Non-ICSR documents.
- Designed and implemented an NLP based classification pipeline for automatic categorization for Nokia NDA contracts, reducing manual review effort.
- Built a NER pipeline to extract key entities from Nokia NDA contracts, enabling structured information extraction for downstream workflows.
- Collaborated in developing an intelligent invoice processing solution using OCR and data extraction techniques to automate document digitization and information retrieval.
- **Technologies:** NLP, Python, Boosting, Spacy NER, AWS Comprehend, Azure OCR, Tesseract, Neural Network, Git, SkLearn, TensorFlow, Keras.

Tata Consultancy Services, India(Dec 2018 – Oct 2021)

- Research and Developed Convolutional Neural Network based model to detect the faces.
- Researched and developed a machine learning model along with many interesting new features for an online store project.

- Researched & developed supervised machine learning models to filter the Citi bank customers who are likely to accept loan offers.
- Researched & Developed Recurrent Neural Networks based model to predict stock prices of 3 Citi Bank.
- **Technologies:** Python, MTCNN, FaceNet, Deep Face, XG Boost, Random Forest, Stacked LSTM, ARIMA, Hadoop

Academics

Bachelor of Technology in Computer Science & Engineering, JNTU Hyderabad
