DATA MIGRATION SPECIALIST -IT INDUSTRY

As Data Migration Specialist in ETL I am responsible for planning, designing, executing, and validating data migration, ensuring data integrity, security, and performance while moving data between systems from legacy systems to Cloud(on premise).

PROFILE

- Technically Competent, diligent and result oriented **Software Professional, offering 11+ years of rich exposure** across planning and executing large End to End testing, Integration, product development and Support projects across the SCM, Manufacturing, Healthcare, Telecom Domain. Currently **Working as Senior Software/Lead Engineer (Data migration Specialist) with TATA Consultancy Services**
- Having 7+ years of data migration, testing and 3 years of Product support and development along with the lead activities.
- Good understanding of SDLC, STLC methodologies, various levels of testing, requirements definition, test analysis & design techniques and documentation using existing quality statistics
- Competencies in creating Project Plan, Test Strategies, Proposals, Test Plans, Operational Business Reports, Test Progress Reports, Project Check Reports, Requirements Analysis and Project Documentation.
- Excellent time management skills with proven ability to work accurately and quickly prioritize, coordinate and consolidate tasks whilst simultaneously managing the diverse range of function from multiple sources.
- Proven track record in hiring and supporting recruitment process, mentoring resources and people management

Core Competencies

- ETL Testing • Data Migration • Data Bricks Testing • ETL Development • ETL Support • Big data Testing
- Database Testing • Manual Testing • Defect Management • Client Interface • STLC • Software Testing
- Resource and Team Management Requirement Analysis • Testing Techniques • Test Case Creation
- Bug Tracking System and Process • Training & Development • Data Warehousing • Python
- Supply Chain Management

Technical Skills

Business Domain	Telecomm, Manufacturing, Healthcare
Environment	Windows, Unix, Oracle, SQL Server
AI Tools	Azure Data Bricks
ETL Tools	Informatica, Data Stage, Big Data, ODI, Amber road, PEPD.
Programming Language	Python
Reporting Tools	Tableau
Methodologies	SDLC, STLC, Agile/Scrum
Database	Oracle, Teradata, Hive
Bug Tracking Tool	Jira, HP Quality centre/ALM, Service now

PROFESSIONAL EXPERIENCE

TATA Consultancy Services

Since Dec 2022

Senior Test / Test Lead Engineer

Roles and Responsibility

- Developed and executed test cases for data engineering solutions built on the Databricks platform.
- Validated ETL/ELT pipelines by comparing source and target data for completeness, accuracy, and consistency.
- Analyze source and target systems, identify discrepancies, and assess data quality issues before migration.
- Execute reconciliation scripts, row counts, checksums, and business acceptance testing to certify migration accuracy
- Work with IT teams and business stakeholders to prioritize data cleanup, resolve issues, and ensure smooth cutover

- Performed data quality testing using SQL to verify data transformations and business rules.
- Tested Databricks notebooks, workflows, and scheduled jobs to ensure successful execution and expected outputs.
- Verified data ingestion from multiple sources into Delta tables and validated data integrity across different processing stages.
- Performed functional, regression, and end-to-end testing for data pipelines and analytics solutions.
- Automated data validation checks using SQL, PySpark, or Python scripts to reduce manual testing effort.
- Identified, logged, tracked, and retested defects using defect management tools such as Jira.
- Collaborated with data engineers, developers, business analysts, and product owners to understand requirements and resolve issues.
- Validated schema changes, data transformations, joins, aggregations, and incremental data loads.
- Executed performance validation for large datasets and monitored pipeline execution to identify bottlenecks.
- Participated in sprint planning, requirement analysis, test planning, test execution, and test closure activities within Agile/Scrum projects.
- Prepared test scenarios, test cases, test execution reports, and maintained testing documentation.

Projects Undertaken:

Project-1:-

Title	Horizon Health care
Team Size	14
Client	Horizon, Newark, US
Domain	Health Care
Software	Azure Data Bircks , Informática Cloud Services, Teradata, Oracle-SQL ,Jira, ALM , Unix
Environment	
Duration	Since Dec 2022
Synopsis	Horizon provides a concise summary of services and systems designed to maintain and improve people's health by preventing, diagnosing, and treating illnesses, injuries, and other physical and mental impairments. It covers various levels of care, including primary, secondary, and tertiary, and involves the organized delivery of medical services by health professionals in settings like hospitals, clinics, and home care.

IBM India PVT LTD

Dec 2021 – Nov 2022

Senior Test Engineer

- Accountable for preparation of System Integration Test Plans, Test Metrics presentations, guidance in designing Test Scenarios, Performing Test Reviews & Preparation of Test Data, performing tasks related to bug tracking & reporting, and preparation of daily test report.
- Responsible for implementing quality process, identifying process bottle necks
- Accomplished responsibility for providing technical consulting to customers in analysis, design, and implementation in the area of management system in various domains
- Actively involved in strategy and release plan, project schedule, effort tracking management, change requests, risks and issues
- Interfaced & coordinated with the clients, stakeholders, testing team and different lines of business
- Evaluated and implemented tools based on ROI, reviewing and providing inputs to project plan, participating in product backlog meeting, providing estimates for releases and RFPs.
- Strategically analysed, planned & conceptualized the processing for the product improvement as well as target fulfilment of the company projects & requirements within the quality parameters while coordinating with the product development & cross-functional teams

Senior Test Engineer**Key Responsibilities**

- Accountable for preparation of System Integration Test Plans, Test Metrics presentations, guidance in designing Test Scenarios, Performing Test Reviews & Preparation of Test Data, performing tasks related to bug tracking & reporting, and preparation of daily test report.
- Responsible for implementing quality process, identifying process bottle necks
- Accomplished responsibility for providing technical consulting to customers in analysis, design, and implementation in the area of management system in various domains
- Actively involved in strategy and release plan, project schedule, effort tracking management, change requests, risks and issues
- Interfaced & coordinated with the clients, stakeholders, testing team and different lines of business
- Evaluated and implemented tools based on ROI, reviewing and providing inputs to project plan, participating in product backlog meeting, providing estimates for releases and RFPs.
- Strategically analysed, planned & conceptualized the processing for the product improvement as well as target fulfilment of the company projects & requirements within the quality parameters while coordinating with the product development & cross-functional teams

Projects Undertaken:**Project-1:-**

Title	SingTel Optus LTD
Team Size	4
Client	Optus, Australia
Domain	Telecom
Software	Informatica, Big data, Teradata, Oracle-SQL , Hive, Hadoop , ALM , Unix
Environment	
Duration	Since Jul 2017
Synopsis	Optus is in the process of implementing the BCC (Billing & Customer Care) system to replace their existing billing and customer care systems (legacy systems). As a part of this change the EIM will sunset billing and customer care capabilities of IDW & ADW and move to the future state architecture which includes building new Enterprise Data Warehouse (EDW). Legacy BCC systems that have interfaces into IDW will only send data corresponding to nonmigrated customers. Migrated and New customer information is only available from new BCC applications. This information will be sent to the new Data warehouse EDW. Program objective is to Test the impacts of this change across IDW and its downstream impacts.

Project 2: -

Title	TRADE AUTOMATION 15 -CISCO (Product Support)
Team Size	2
Domain	M&T
Software	Informatica, Oracle-SQL, Front application, Teradata, Service Now
Environment	
Duration	Apr 2015-Jun 2017
Synopsis	Cisco Systems Inc is a leading manufacturer of networking products in the world. The end-to-end cycle of Cisco's advanced manufacturing process is supported through Cisco ITDS Managed Services Support. The Project is about supporting and enhancing the Manufacturing ERP of Cisco System. TA15 track of the ITDS Support engagement deals with order fulfilment and logistics part of the order management cycle. Amber road is a cloud base provider of global trade management solutions. It deals with import and export process so that they can move the goods National and International in most efficient and complain way and it is a P1 Application.

EDUCATIONAL DETAILS

Integrated M. Tech in IT, 2019

VIT University, CGPA 7.64

Bachelor of Science, 2014

BVK Degree College, CGPA 6.63

Date of Birth: 30-Sep-1993

Linguistic Abilities: English, Telugu, Hindi
