SUMMARY

I am a Data Engineer with 7 years of experience designing and scaling cloud-based data platforms. Expert in ETL/ELT pipelines, Snowflake, Python, SQL, and AWS. Proven track record of modernizing legacy systems, building analytics-ready data models, and enabling self-service BI for business stakeholders.

SKILLS

Languages- Python, SQL.

Data Warehousing- Snowflake, SQL Server.

Distributed Processing - Apache Spark (Pyspark).

Orchestration - Airflow, Snowflake Tasks.

Cloud - AWS (S3, IAM).

Data Engineering - ETL/ELT, Data Pipelines, Distributed Processing, Incremental Loads, Data Modeling, Schema Design, Performance Optimization, Data Quality Checks, API Integrations.

EXPERIENCE

KIPI.AI INDIA PVT LTD

BANGLORE, INDIA

Lead Engineer

Nov 2021 - Oct 2025

I initially Joined Apisero in November 2021 and was internally transferred to Kipi.ai in January 2022 following its formation.

Project-1 : Magna Legal Services (BI Modernization using Snowflake & Sigma)

The project aimed to replace Magna LS's manual in-house reporting system with a modern BI stack by implementing Snowflake with a 3-layered architecture and enabling dashboarding through Sigma for scalable, self-service analytics.

Key Responsibilities:

Snowflake (Data Engineering & Migration):

- Analyzed existing **Snowflake datasets using SQL** to understand data structures and business logic.
- Designed Entity Relationship Diagrams (ERDs) and Data Flow Diagrams for multiple source systems prior to development.

- Reviewed and implemented client-provided **Snowflake stored procedures using SQL and Python-based logic where applicable.**
- Developed full-load and incremental data pipelines using **Snowflake SQL (stored procedures, views) and Python-based transformations integrated via Snowpark/ETL tools.**
- Conducted thorough unit and integration testing using **SQL queries and Python validation scripts**, including cross-verification with Magna's internal UI.
- Led end-to-end data migration for the complex RT Collections pipeline using **Snowflake and SQL-based transformations**, ensuring accuracy and completeness.

Platform-Specific Data Solutions:

- Bigtime: Developed end-to-end pipelines using **Snowflake SQL and Python-based transformations** for conflict reporting.
- Hubspot: Analyzed CRM data and built **SQL-based logic in Snowflake**, enabling downstream reporting.
- UPS: Integrated external APIs and processed data using **Python for ingestion and Snowflake SQL for transformation and storage.**

Orchestration & ETL Tools:

- Migrated workflows from Fivetran to Airflow, leveraging **Python DAGs and SQL-based transformations in Snowflake.**
- Built pipelines in ADF integrating **Python and SQL logic** as per client requirements.

SQL Server Migration:

- Translated and optimized multiple **SQL Server queries and stored procedures into Snowflake SQL**, ensuring performance and compatibility.

Project-2 : Masterclass (Data Governance & Monitoring in Snowflake)

To enable smoother migration from Redshift to Snowflake by creating administrative scripts and automation so Masterclass can focus on core transformations and efficiently onboard new users and resources and monitor them in a streamlined manner.

Key Responsibilities:

1. PII Masking Automation:

- Designed and implemented masking policies and data tags using **Snowflake SQL** to ensure compliance with data privacy standards.
- Developed automated scripts using **Python and SQL** to identify Personally Identifiable Information (PII) columns across datasets.
- Built automation logic using **Snowflake and Python** to dynamically apply data tags on newly added columns for ongoing compliance.

2. User & Role Monitoring:

- Developed interactive dashboards by querying **Snowflake ACCOUNT_USAGE views using SQL** to visualize user-to-role and role-to-privilege mappings.
- Enhanced access transparency and governance by implementing **SQL-based monitoring queries and Python-driven analysis** of role assignments.

3. Credit and Performance Monitoring Dashboards:

- Built dashboards using **Snowflake SQL queries** to track compute credit consumption by warehouse and user over time.
- Created visualizations by analyzing **Snowflake usage data via SQL** to monitor storage consumption and optimize costs.
- Developed monitoring solutions using **SQL and Python** to identify and analyze long-running and resource-intensive queries for performance tuning.

4. Resource Monitors and Alerts:

- Configured **Snowflake resource monitors using SQL** to control compute usage and prevent credit overruns.
- Designed a Proof of Concept (PoC) using **Python and SQL** for automated email alerts on credit threshold breaches.
- Built customizable dashboards using **Snowflake SQL and Python-based logic** for real-time monitoring of usage and alerts.

TCS

System Engineer

INDORE, INDIA

Jan 2019 to Nov 2021

Project-1: Microsoft (Xbox Data Engineering & Analytics)

Worked on the backend data infrastructure supporting Microsoft Xbox analytics. The focus was on building and automating data pipelines, performing data quality validations, and enabling accurate data flow for consumption by downstream analytics and reporting teams.

Key Responsibilities:

- Developed and maintained scalable data pipelines using **SQL-based transformations and queries** to support large-scale data processing.
- Automated and orchestrated workflows using XFLOW, ensuring timely and efficient data processing.
- Conducted comprehensive data validation and quality checks using **SQL queries** to maintain the integrity of production datasets.
- Supported the analytics team by validating the input data used in Power BI reports using **SQL-based analysis**, ensuring correctness and completeness.

- Executed complex ETL transformations, including cleansing, joining, and structuring data using **SQL** for analytics consumption.

EDUCATION

BE – IT

LNCT, RGPV University- 8.24 CGPA

INDORE, INDIA

2014 to 2018

HSC

Shri Barfani Academy - 88.8%

INDORE, INDIA

2013 to 2014

SSC

Kendriya Vidyalaya No.1- 9.0 CGPA

INDORE, INDIA

2011-2012

CERTIFICATIONS

- Certified in Snowflake , SnowPro Core Certification Exam - 7th July 2024.

ADDITIONAL INFORMATION

- Received Multiple Star Crew Awards for Outstanding Performance and contributions to kipi.bi.
- Received Eureka Force Award Q4 2024 in recognition of trendsetter at kipi.bi.
- Best performer award at TCS.
