PROFESSIONAL SUMMARY

Results-driven .NET Software Developer with over 5+ years of experience designing, developing, and deploying scalable enterprise-grade web applications. Expert in .NET Core, .NET MVC, Angular and RESTful APIs with a strong focus on clean architecture, SDLC, unit testing, and cloud-based deployments. Proven track record of independently architecting SaaS products and modernizing legacy systems.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Python, VBScript

Backend: .NET Core Web API, ASP.NET MVC, Entity Framework Core, ADO.NET, REST

Frontend: Angular, HTML, CSS, jQuery, Bootstrap, RxJS

Databases: SQL Server, T-SQL, MSSQL

Tools: Git, Azure Repos, Azure DevOps, CI/CD, .NET Core, .NET Framework, Github Copilot

EXPERIENCE

Full Stack Developer | Comitas AG Pvt Ltd, Bangalore, India

Jan 2024 – Present

Fallführung (SaaS for Case Management & Workflow Automation)

- Spearheaded the end-to-end SDLC of 'Fallführung', a SaaS case management solution, acting as the sole developer to translate business requirements into a scalable, multi-tenant architecture.
- Architected high-performance RESTful APIs using ASP.NET Core and Entity Framework Core, implementing advanced validation, error handling middleware, and optimized LINQ queries.
- Engineered a modern Single Page Application (SPA) using Angular, utilizing RxJS for state management and creating reusable components to deliver a seamless user experience.
- Designed normalized MSSQL schemas supporting complex workflows, ensuring data integrity via strict constraints and transaction management.

MVB (Internal Employee Management Platform)

- Collaborated within an Agile team to engineer 'MVB', an internal workforce platform, facilitating precise time tracking, leave management, and expense reimbursement workflows.
- Developed robust ASP.NET Web API endpoints to handle high-concurrency requests, ensuring data consistency and secure role-based access control (RBAC).
- Built interactive Angular dashboards to visualize critical KPIs, enabling management to track logged hours, absence trends, and project-specific expenses in real-time.

Olympic Bob Run Portal (Public Sport Event Booking Platform)

- Designed a public-facing event booking portal with intuitive registration workflows, integrating Stripe API to facilitate secure, PCI-compliant payment processing.
- Implemented a notification system using third-party SMS gateways (aspsms.ch) and engineered document generation using Syncfusion for dynamic invoices.

Senior Software Engineer | LTIMindtree Ltd, Bangalore, India

Mar. 2021 – Jan. 2024

- Led the modernization of a legacy insurance application, migrating from Classic ASP to ASP.NET MVC, resulting in improved page load times and maintainability.
- Developed secure RESTful API endpoints for the policy issuance module, facilitating seamless data exchange between internal underwriting systems and third-party aggregators.
- Engineered process automation for the Policy Issuance Life Cycle, significantly reducing manual intervention in renewals, claim validation, and compliance reporting.
- Managed QA/UAT environments on Windows Servers and coordinated release cycles, troubleshooting IIS deployment issues to ensure high availability.
- Directed migration from TFVC to Azure Git and architected CI/CD pipelines in Azure DevOps, automating build and deployment processes to accelerate delivery.

EDUCATION

Global Academy of Technology (VTU)

Bachelor of Engineering in Electronics & Communication Engineering

Bengaluru, Karnataka, India

Aug. 2016 – May 2020
