PROFESSIONAL SUMMARY

Full-stack Software Developer with 3.5+ years of experience building scalable applications using **.NET Core (C#) and React.js**. Expertise in designing and developing **REST APIs, microservices, and client-server architectures**. Experienced in **Agile environments, system design, and code reviews**, delivering high-performance, scalable, and maintainable solutions.

PROFESSIONAL EXPERIENCE

Alstom Transport India Limited- Bangalore, India

Software Developer

June 2022 – April 2026

Developed a full-stack platform for real-time data processing, monitoring, and deployment automation for high-volume enterprise applications.

Designed and developed end-to-end backend services using **.NET Core and REST APIs**, enabling efficient client-server communication and real-time data processing.

Built interactive React.js dashboards to monitor alerts, system health, and operational workflows.

Implemented event-driven architecture using **Apache Kafka, handling high-throughput streaming data** and improving system responsiveness.

Engineered data pipelines to transform gateway alerts into structured formats, enhancing observability and fault detection.

Developed proxy services to aggregate system alarms, telemetry, and internal states, improving system visibility. Implemented monitoring and diagnostic workflows supporting both normal and degraded modes, increasing system reliability.

Containerized applications using **Docker and deployed on Kubernetes, reducing deployment time by ~60%** and improving scalability.

Built scalable backend systems using C#, .NET Core, and PostgreSQL, including REST APIs and web services for robust data handling.

Designed and developed a full-stack RBAC system using React.js and backend services, enabling secure authentication and authorization across multiple enterprise applications.

Built **REST APIs and role-permission management logic** to enforce access control and ensure consistent user authorization.

Developed dynamic React.js interfaces for managing users, roles, and permissions, improving usability and administrative efficiency.

Implemented secure access validation mechanisms to protect application endpoints and sensitive data.

Improved access management consistency and system security, reducing manual intervention and access-related issues. Streamlined reporting workflows for managers, enhancing operational efficiency.

Recognized with a **Golden Innovation Award** for delivering high-impact and scalable solution.

Built a Configuration Tool to automate generation of deployment configuration files (JSON/YAML) for Kubernetes clusters based on .NET Core applications, improving deployment reliability and reducing configuration errors by **80%**. Implemented schema validation to enforce file correctness, enhancing system robustness. Recognized with the **Silver Award** for delivering impactful automation.

Developed a full-stack application with React.js frontend and backend services to manage employee lifecycle processes, replacing manual Excel tracking and improving reporting efficiency for HR and managers.

Designed and implemented an end-to-end test automation framework using **Selenium, Robot Framework, Python, and MySQL**, automating execution of test cases across components by leveraging Kafka commands. Achieved **90% reduction in manual testing effort** and provided real-time test reports, improving release confidence and shortening QA cycles.

Led integration testing efforts by implementing and executing comprehensive test case validation processes based on software requirements, ensuring thorough verification and validation of software components. Proactively identified and resolved critical issues during pre-production, resulting in a reduction in production bugs and significantly enhancing overall product stability.

SKILLS

Backend: C#, .NET Core, REST APIs, Web Services, Microservices, Node.js, Python, Java

Frontend: React.js, Redux, JavaScript, HTML5, CSS3

Databases: PostgreSQL, MongoDB, MySQL

Tools & Technologies: Docker, Kubernetes, Apache Kafka, Git, GitLab

Testing & Automation: Selenium, Robot Framework

Development Practices: Agile Methodology, Full-Stack Development, Code Reviews, CI/CD, System Design

Core Competencies: Authentication & Authorization (RBAC), Client-Server Architecture, Configuration Management, Integration Testing, Containerization, Performance Optimization, Process Automation

Languages: English, Hindi and Marathi

EDUCATION

PG-DAC – Hyderabad, India 2022

Centre for Development of Advanced Computing, Hyderabad

RTM Nagpur University – Nagpur, India 2021

Bachelor of Engineering in Computer Science, CGPA: 9.2/10

PROJECTS

PG-DAC Project: E-Housing Society Project 2022
Centre for Development of Advanced Computing, Hyderabad

- **Designed and implemented** responsive front-end interfaces for house owners and tenants using **HTML5, CSS3, and JavaScript**, ensuring intuitive user experience for managing entries, security checks, smart notifications, and approval workflows.
- **Developed and integrated RESTful APIs** using **Spring Boot** to handle business logic, authentication, and approval processes, enabling seamless interaction between frontend and backend systems.
- **Architected and managed relational database schema** in **MySQL**, optimizing data relationships between users, access logs, notifications, and approval records to ensure data consistency and performance.
- Followed **Agile development practices** and version control using **Git** for efficient team collaboration and iterative project delivery.

B.E Project: Event Management System 2021
Event Management System Project

- **Developed a full-stack web application** for managing event registrations, schedules, and participant interactions using **HTML5, CSS3, JavaScript (Frontend)** and **PHP, MySQL (Backend)**.
- Implemented dynamic event creation, participant registration, and automated email notifications using server-side scripting in **PHP** integrated with a **MySQL relational database** for data storage and retrieval.
- Designed intuitive user interfaces to enhance user experience and responsiveness across devices.
- Ensured secure data handling and role-based access control for event organizers and participants.
- Managed version control and collaborated within the development team using **Git** for streamlined code management and deployment.

CERTIFICATIONS, PUBLICATIONS & PROFESSIONAL DEVELOPMENT

- Published a Research Paper in “International Journal Of Advance Research And Innovative Ideas In Education” entitled “Event Management System”.
- Attended “Trends and Opportunities in Cloud Technology & Information Security” Webinar Organized by Department of Robotics & Cloud Technology, RTMNU, Nagpur held on Feb 27, 2021.
- I attended the webinar “Artificial Intelligence (AI) in Covid19 Diagnosis & Cure”.
- Presented a Research Paper in “Spark 2k21”.
- Got course completion certificate of Accenture Consultant Program from Nordic Forge.
