

ASHISH HANS

Senior Project Engineer

mr.ashish.hans7@gmail.com | +919467567625

New Delhi, India 110001

PROFESSIONAL SUMMARY

Cybersecurity professional with 7+ years of experience specializing in Vulnerability Assessment & Penetration Testing (VAPT), DevSecOps, system hardening, and Privileged Access Management (PAM). Proven track record in identifying, validating, and reporting vulnerabilities in internal networks, web applications, and Linux-based infrastructures, with deep expertise in compliance audits (UIDAI, CIS) and hands-on work with industry-standard tools like Burp Suite, Metasploit, Wireshark and vulnerability scanning automation.

WORK EXPERIENCE

Senior Project Engineer – CDAC, New Delhi | Aug 2023 – Present

- Conducted vulnerability assessments for web and software applications to Identify business-critical risks.
- Identified misconfigured services, open ports, weak credentials, and outdated packages
- Mapped findings to OWASP Top 10 and CIS controls, prepared detailed audit & remediation reports
- Performed password rotation and session analysis to mitigate access-related Risks
- Implemented PAM solutions to restrict unauthorized access and prevent insider threats.
- Configured WAF rules to defend against CSRF, brute-force, and cookie tampering attacks
- Tools used: Burp Suite, OSSEC, tcpdump, Wireshark, Metasploit, NMAP
- Translated technical findings into executive summaries for leadership
- Utilized ManageEngine Endpoint Central for third-party patches across enterprise endpoints to close vulnerabilities flagged in VAPT reports
- Monitored AISIEM alerts and responded to security incidents in real-time
- Performed malware, phishing, and unauthorized access investigations
- Coordinated with blue team for escalation and remediation
- Documented incidents and created reports for SOC workflows
- Implemented Threat Indicator ingestion and tuning in AISIEM SIEM, enabling early detection of malicious activities.
- Performed vulnerability assessments on SD-WAN cloud-based Linux environments using Nessus, identifying and validating critical security vulnerabilities across distributed infrastructure
- Remediated vulnerabilities through patch management, kernel updates, and Linux hardening, aligned with industry benchmarks (CIS, OWASP)

ISMS-Driven Penetration Testing & System Hardening

Project Engineer – CDAC, Mumbai | Oct 2018 – Aug 2023

- Executed UIDAI-guided VAPT audits for Aadhaar authentication systems
- Deployed and tuned tools like Nmap, w3af, and Snort for scanning and intrusion detection
- Hardened Linux-based AUA servers with secure SSH policies and service-level restrictions
- Work closely with DevOps team to integrate security tools into CI/CD pipelines
- Ensured high availability and security for e-KYC authentication services
- Research and Simulate fraud scenarios such as business logic abuse, credential stuffing and SQL injection
- Develop automated scripts for scanning and reporting on vulnerability trends.
- Investigated cyber threats using OSINT tools and tracked fraud techniques on the dark web

EDUCATION

Advanced Certificate in Cybersecurity – IIIT-Bangalore 11/2022
GPA: 3.60/4.00 [CGPA]

Post Graduate Diploma in IT Infrastructure, Systems & Security, CDAC ACTS, Pune 08/2018
• Final Grade: 64.89%

Maharishi Dayanand University - Rohtak, India 08/2014 - 06/2017
B.tech: Computer Science
GPA: 7.05 [CGPA]
• Final Grade: 67.54%

Vaish Technical Institute, Rohtak - Rohtak, India 08/2011 - 07/2014
Diploma: Computer Engineering
GPA: 83%
• Final Grade: 58.53%

CERTIFICATIONS

Advanced Penetration Testing 03/2024
Ethical Hacking 06/2017
Network Security 10/2016
Networking 09/2016

SKILLS

- VAPT Security Testing: Burp Suite, OWASP ZAP, Metasploit, Nmap, w3af, Nessus, Accunetix, Wireshark
- Vulnerability Assessment: OWASP Top 10, CIS Benchmarks, UIDAI audit guidelines
- OS & Platforms: Linux (Kali Linux, CentOS), Windows Server
- Fraud Detection: Business Risk Mapping, Credential Stuffing, SQL Injection, Session Hijacking
- Programming/Scripting: Python, Bash and Automation of Security Tasks
- Security Frameworks: Secure SDLC, Threat Modeling, Incident Handling
- Tools & Platforms: Docker, Nagios, IAM Security Services, ACLs, Kali Linux and CentOS
- Reporting & Remediation: Risk Reports, Audit Compliance, Mitigation Plans
- Research: Threat Intelligence, Fraud Techniques, Malicious Website Analysis
- Soft Skills: Analytical Thinking, Communication with Non-Technical Stakeholders
