

NAGAMANI BHAIRA MOGER

QA Automation Engineer | SDET

Bengaluru, Karnataka | Phone: 8105247469 | Email: nagamanimoger@gmail.com

PROFESSIONAL SUMMARY

Results-driven QA Automation Engineer with 4+ years of experience delivering high-quality software across web-based enterprise applications. Expertise in Selenium WebDriver, **Serenity BDD**, **Cucumber**, TestNG, and Page Object Model (POM) with CI/CD integration using Jenkins. Proven track record of designing scalable test automation frameworks that reduced manual testing effort and defect leakage in Agile/Scrum environments. Skilled in cross-browser testing, performance testing, web services validation, and defect lifecycle management. Adept at leveraging AI-assisted tools like GitHub Copilot to accelerate test development and improve code quality.

TECHNICAL SKILLS

Automation Tools: Selenium WebDriver, Serenity BDD, Cucumber, TestNG, Page Object Model (POM)

Programming: Java

Web Services & Performance Testing: SOAP UI, JMeter

Security & Auth Testing: SAML, SSO (Single Sign-On), Authentication & Authorization Testing

CI/CD & DevOps: Jenkins, Git, GitHub

Test Management & Defect Tracking: Jira, Confluence, Defect Lifecycle Management

Testing Types: Automation Testing, Manual Testing, Web Services Testing, Performance Testing, Cross-Browser Testing, Regression, Smoke, Sanity, Functional Testing, UAT

Database: MySQL, MongoDB

Cloud: AWS S3

Methodologies: Agile, Scrum, BDD, SDLC, STLC

AI Tools: GitHub Copilot

WORK EXPERIENCE

QA Automation Engineer / SDET (Member Technical) | Broadridge Financial Solutions | Dec 2023 – Present

Automation Testing

- Designed and maintained automated UI test cases covering end-to-end regression flows using Selenium WebDriver with Serenity BDD and Cucumber, implementing Page Object Model (POM) for scalable test architecture.
- Contributed to expanding automated regression coverage, reducing reliance on manual testing and improving overall release confidence.
- Developed reusable, modular test components following BDD principles, ensuring maintainable automation across multiple sprint cycles.
- Integrated automation suite with Jenkins CI/CD pipeline for scheduled and on-demand execution, enabling continuous testing and faster feedback loops.
- Leveraged GitHub Copilot to accelerate test script development, improve code accuracy, and reduce manual coding effort by ~30%.
- Generated rich Serenity HTML execution reports to track quality metrics and support data-driven decisions for stakeholders.
- Performed cross-browser testing to validate consistent functionality across Chrome, Firefox, and Edge.

Manual QA & Security Testing

- Validated SAML-based SSO (Single Sign-On) authentication flows manually using browser tools, verifying secure identity federation, token assertions, and seamless login across integrated enterprise applications.
- Used SOAP UI to validate web service requests and responses, verifying endpoint behaviour and error handling as part of integration testing.

- Executed comprehensive manual UI testing for web applications validating functionality, usability, and business rule compliance.
- Created and maintained detailed test cases, test plans, and test scenarios based on user stories and business requirements.
- Identified, documented, and tracked defects through the full defect lifecycle using Jira, collaborating closely with developers for root cause analysis and timely resolution.
- Performed regression, smoke, sanity, and functional testing within Agile sprint cycles, consistently meeting release deadlines.
- Participated in daily stand-ups and sprint planning meetings to ensure strong QA-development alignment.

QA Engineer – Manual & Performance Testing | Accenture | July 2019 – May 2021

- Prepared, executed, and reported on 200+ test cases across multiple product releases, ensuring high software quality standards.
- Conducted functional and regression testing across sprint cycles, directly contributing to a measurable reduction in post-release defects.
- Coordinated smooth test plan implementation with cross-functional development teams, improving overall release efficiency.
- Mentored and onboarded new QA team members, reducing ramp-up time and improving team productivity.
- Performed performance testing using JMeter and SOAP UI; analyzed response times, throughput, and concurrent load to identify and resolve performance bottlenecks.
- **Worked on healthcare standard FHIR and V2 inputs**
- Analyzed performance results and graphs via Jenkins to support data-driven optimization of application performance.

EDUCATION

Bachelor of Engineering – Computer Science | RNS Institute of Technology, Bengaluru | 2015 – 2019 | CGPA: 7.88

Jun 2021 – Jun 2023: Program of self directed study in preparation of highly competitive UPSC EO/AO exam.

CERTIFICATIONS

- Selenium WebDriver with Java for Beginners – Udemy
- Advanced Selenium WebDriver with Java and TestNG – Udemy

KEY ACHIEVEMENTS & IMPACT

- Expanded automated regression coverage at Broadridge by building reusable, maintainable test components, directly accelerating sprint release velocity.
- Built and maintained a suite of reusable automated test cases at Broadridge, reducing new test script creation time and improving team efficiency.
- Executed 200+ test cases at Accenture across multiple releases, contributing to consistent on-time, high-quality software delivery.
- Leveraged GitHub Copilot for AI-assisted test automation at Broadridge, improving team script accuracy and productivity.
- Successfully mentored junior QA engineers at Accenture, improving team onboarding efficiency and knowledge transfer.
